PUBLICATIONS OF THE U.S. GEOLOGICAL SURVEY, 1971-1981

This catalog is a list of books and maps published between 1971 and 1981. It supplements the past permanent catalogs "Publications of the Geological Survey, 1879-1961" and "Publications of the Geological Survey, 1962-1970." It also lists those reports in the 1879-1961 and 1962-70 catalogs that are out of stock and NO LONGER AVAILABLE.

Individual topographic quadrangle maps are not listed; they are shown on State indexes to topographic maps, which are free on application. These indexes also show commercial dealers in each State.

The permanent catalogs, annual supplements, individual monthly catalogs, State listings, and a special and general interest listing are available under the conditions indicated below from the U.S. Geological Survey, Books and Open-File Reports Section, Federal Center, Bldg. 41, Box 25425, Denver, CO 80225. The catalogs are also available over the counter at any of the Geological Survey offices that sell books.

Permanent catalogs "Publications of the Geological Survey, 1879-1961"; "Publications of the Geological Survey, 1962-1970"; and "Publications of the U.S. Geological Survey, 1971-1981" may be purchased for $6 in paperback book form or for $4 as a set of microfiche (includes listings volume and index volume).

Supplements for 1982, 1983, 1984, and 1985 are available free of charge; annual supplements for future years will become available on publication. Requests should be limited only to single copies because of high production and distribution costs.

A catalog entitled "Selected Special or General Interest Publications of the Geological Survey" may be obtained free on request.

State catalogs and a monthly catalog "New Publications of the U.S. Geological Survey" may be obtained free on request.

Those wishing to be placed on a free subscription list of the monthly catalog "New Publications of the U.S. Geological Survey" should apply in writing to the U.S. Geological Survey, 582 National Center, Reston, VA 22092.

Out-of-stock publications are NO LONGER AVAILABLE; they may still be consulted at many public and educational institution libraries, and some can be bought from dealers as second-hand books. Publications that go out of stock after compilation of the present catalog will be listed by series and number in future catalogs.

Prices of Government publications are subject to change. Increases in costs make it necessary for the Government to increase the selling prices of many publications offered. As it is not feasible for the Government to correct the prices manually in all previous announcements and publications stocked, the prices charged may differ from the prices in the announcements and publications. Accordingly, publications prices are not posted in this permanent catalog; they are available on request to U.S. Geological Survey offices selling books and maps.

All USGS publications have increased in price. The minimum for any USGS book publication is $1 with the exception of Circulars which are free in limited quantities. This applies to all publications previously advertised, including those in the list of Geological Survey geologic and water-supply reports and maps for each State.

BULLETINS

Bulletins contain significant data and interpretations that are of lasting scientific interest but are generally more limited in scope or geographic coverage than professional papers. They include the results of resource studies and of geologic and topographic investigations; as well as collections of short papers related to a specific topic.

The present listing indicates reports that are "out of stock" and no longer available. Miscellaneous and Special Books

GEOGRAPHIC NAMES INFORMATION SYSTEM (GNIS)

The Geographic Names Information System currently consists of approximately two million name entries with information about the feature name and category and its geographic location by coordinates, country, and USGS topographic quadrangles. The name file was developed from published 7.5-minute topographic maps. In areas where 7.5 minute quadrangles have not been published, 15-minute quadrangles or 1:250,000-scale maps provided basic name data.

Presently available are State Alphabetical Findings Lists. These lists consist of spiral-bound computer printouts of name files. Included with each State list are definitions, the Federal Information Processing Standards (FIPS) code designation, quadrangle map name in alphabetical order and also numerical sequence, and alphabetical listings with coordinates. State files are also available in microfiche.

Unedited computer printouts, specialized searches, and computer tapes may also be purchased.

GNIS, developed by Geographic Names Information Section, Branch of Geographic Names, Office of Geographic Research, National Mapping

Division, is the basis for Professional Paper 1200. The first chapter, P-1200-J (New Jersey) was published in 1982 (revised 1983) and the others will follow. The interim materials described may meet the needs of a wide variety of potential users until all chapters have been published.

Products may be ordered from U.S. Geological Survey, NCIC, 507 National Center, Reston, Virginia 22092, (703) 860-6039. Unedited computer printouts are available for all other States and territories.

Information and Specialized searches may be requested from U.S. Geological Survey, Manager GNIS, 523 National Center, Reston, Virginia 22092. Telephone (703) 860-6261.
