A SELECTIVE BIBLIOGRAPHY:
REMOTE-SENSING APPLICATIONS IN LAND-USE
AND LAND-COVER INVENTORY TASKS

William J. Todd

Technicolor Graphic Services, Inc.

ABSTRACT

The bibliography contains more than 300 citations of selected publications on the application of remote-sensing techniques to regional and metropolitan land-use and land-cover inventory and analysis tasks. Most of the citations were published between January 1968 and June 1977, although some earlier works of continuing interest are included.

INTRODUCTION

This bibliography provides a comprehensive list of references on the application of remote-sensing techniques to regional and metropolitan land-use and land-cover inventory and analysis tasks. Although the bibliography is not all inclusive, most significant domestic works published from January 1968 to June 1977 have been included.

The major U.S. periodicals and symposia and professional meeting proceedings were examined, as were NASA listings of reports dealing with remote sensing. Certain works written prior to 1968 that were considered to be particularly significant and still useful were included, although no complete attempt was made to search all earlier sources. Although some foreign works have been included, the listing of such articles is not comprehensive.

The publications having an NTIS identification number such as NTIS N76-17564 are available from the National Technical Information Service (NTIS), 5285 Port Royal Road, Springfield, Virginia 22161.
