Preface

This volume of the annual hydrologic data report of Idaho is one of a series of annual reports that document hydrologic data gathered from the U.S. Geological Survey's surface-, ground-, and quality-of-water data-collection networks in each State, Puerto Rico, and the Trust Territories. These records of streamflow, ground-water levels, and quality of water provide the hydrologic information needed by Federal, State, and local agencies and the private sector for developing and managing our Nation's land and water resources. Hydrologic data for Idaho for the 2005 water year are contained in two volumes:

Volume 1. Surface Water Records for Idaho

Volume 2. Ground Water Records for Idaho

This report is the culmination of a concerted effort by dedicated personnel of the U.S. Geological Survey who collected, compiled, analyzed, verified, and organized the data, and who revised, edited, illustrated, and assembled the report. In addition to the authors who had primary responsibility for assuring that the information contained herein is accurate, complete, and adheres to Geological Survey policy and established guidelines, the following individuals contributed significantly to the collection, processing, and tabulation of the data:

Rick L. Backsen, Post Falls Field Office Chief

Jack D. Doyle, Boise Field Office Chief

Nathan D. Jacobson, Idaho Falls Field Office Chief

Robert E. Reaves, Twin Falls Field Office Chief

13. ABSTRACT <i>(Maximum 200 words)</i> Water resources data for the 2005 water year for Idaho consists of records of stage, discharge, and water quality of streams; stage, contents, and water quality of lakes and reservoirs; discharge of irrigation diversions; and water levels and water quality of groundwater. The two volumes of this report contain discharge records for 204 stream-gaging stations and 9 irrigation diversions; stage only records for 5 stream-gaging stations; stage only for 6 lakes and reservoirs; contents only for 13 lakes and reservoirs; water-quality for 26 stream-gaging stations, 19 lakes sites, and 450 groundwater wells; and water levels for 465 observation network wells. Additional water data were collected at various sites not involved in the systematic data collection program and are published as miscellaneous measurements. Volume 1 contains the surface-water and surface-water-quality records. Volume 2 contains the ground-water and ground-water-quality records. These data represent that part of the National Water Data System operated by the U.S. Geological Survey and cooperating State and Federal agencies in Idaho, adjacent States, and Canada.
