INDEX TO U.S. GEOLOGICAL SURVEY COMPUTER FILES CONTAINING DAILY VALUES FOR WATER PARAMETERS TO SEPTEMBER 30, 1971—NORTHEASTERN REGION

By Charles R. Showen and Neil G. Stuthmann

INTRODUCTION

This report lists stations at which the U.S. Geological Survey collects water data either on a continuous basis or at least on a daily basis. The files contain daily values for streamflow, reservoir levels, water temperatures, specific conductance, sediment discharge plus several other quality parameters that are either measured by means of monitoring equipment or result from analyses of samples collected on a daily basis.

This report is one of four covering the United States and Puerto Rico. The reports are prepared on a regional basis. The regions and the respective States within each region are given below:

<i>Northeastern Region</i>	<i>Southeastern Region</i>	<i>Central Region</i>	<i>Western Region</i>
Connecticut	Alabama	Arkansas	Alaska
Delaware	Florida	Colorado	Arizona
District of Columbia	Georgia	Iowa	California
Illinois	Kentucky	Kansas	Hawaii
Indiana	Mississippi	Louisiana	Idaho
Maine	North Carolina	Missouri	Nevada
Maryland	Puerto Rico	Montana	Oregon
Massachusetts	South Carolina	Nebraska	Washington
Michigan	Tennessee	New Mexico	
Minnesota		North Dakota	
New Hampshire		Oklahoma	
New Jersey		South Dakota	
New York		Texas	
Ohio		Utah	
Pennsylvania		Wyoming	
Rhode Island			
Vermont			
Virginia			
West Virginia			
Wisconsin			

STATION LISTING AND STATION NUMBERS

Surface-water stations are listed in downstream direction along the main stream, and stations on the tributaries are listed between stations on the main stream in the order in which those tributaries enter the main stream. Stations on

tributaries entering above all mainstream stations are listed before the first mainstream station. Stations on tributaries to tributaries are listed in a similar manner. In this report the stations are listed in downstream order within each State.

As an added means of identifying each site a station number has been assigned. The sequence of numbers is the same as the listing of downstream stations in this report. Gaps are left in the numbers to allow for new stations that may be established; hence, the numbers are not consecutive. The complete 8-digit number for each station, such as 01020000 includes the 2-digit part number "01" plus the 6-digit downstream order number "020000." The part number refers to the area whose boundaries are outlined in figure 1.

Certain other stations have been assigned station numbers based on the grid system of latitude and longitude. Included in this group are off-stream sites such as wells, stations located in large open-water areas, and certain sites where data are collected on an intermittent basis. The station numbers for these sites consists of 15-digits. The first 6-digits denote the degrees, minutes, and seconds of latitude. The following 7-digits denote degrees, minutes, and seconds of longitude. The last 2-digits comprise a sequential number for sites within a 1-second grid. This system provides both the geographic location of the site and a unique number for each site. In this report these stations are listed according to station number within each State.

EXPLANATION OF DATA

Each data item is identified by a 5-digit parameter code. A parameter code list for daily data is given in table 1. A statistic code also is used to indicate either the frequency of data collection or the extreme values for the day or an instantaneous value for the day. Statistic codes that apply to daily data are given in table 2.

The first line of information for each station contains the station name, State code, the district code of the State in which the Geological Survey office that operates the station is located, and the drainage area (if available) above the site. The State codes are those presented in the Federal Information Processing Standards Publication Number 5-1, dated June 15, 1970, and entitled "States and Outlying Areas of the United States."

Each of the following lines of information shows the station number of the site and the following information:

1. XSEC LOCATION The cross-section location of the sampling site recorded as the distance in feet from the left bank (as determined by facing downstream). A blank field indicates no value stored for cross-section location.
2. DEPTH The depth of the sampling point, in feet below the water surface. Top values are recorded as '111111' and bottom values are recorded as '888888'. A blank field indicates no value stored for depth.

Table 1.—*Parameter code list for daily data*

<i>Parameter Code</i>	<i>Description</i>
00940	Chloride (MG/L as CL)
00080	Color (Platinum-Cobalt Units)
00095	Conductivity (Micromhos at 25°C)
00300	Dissolved Oxygen (MG/L)
70301	Dissolved Solids (Sum of Constituents)
72020	Elevation (Ft. above MSL)
90000 ^a	Elevation (In.)
00012	Evaporation Temperature (48 In. Pan Deg. C)
00013	Evaporation Temperatures (24 In. Pan Deg. C)
00950	Fluoride, Dissolved (MG/L as F)
00400	pH (Standard Units)
00650	Phosphate (MG/L as PO ₄)
00045	Rainfall, Accumulated (In.)
72021	Reservoir Storage (CFS-DAYS)
72022	Reservoir Storage (Million Gallons)
72023	Reservoir Storage (Million Cubic Feet)

Figure 1.—Map of the United States showing boundaries of the major drainage basins used in assigning surface-water station numbers.

Table 1—*Parameter code list for daily data*—Continued

<i>Parameter Code</i>	<i>Description</i>
00054	Reservoir Storage (AC-ft)
00065	Stage (Ft. above Datum)
00060	Streamflow (CFS)
00945	Sulfate (MG/L as SO ₄)
80154	Suspended-Sediment Concentration (MG/L)
80155	Suspended-Sediment Discharge (TONS/DAY)
00020	Temperature, Air (Deg. C)
00010	Temperature, Water (Deg. C)
80156	Total-Sediment Discharge (TONS/DAY)
00070	Turbidity (JTU)
00014	Wet Bulb Temperature (Deg. C)
00035	Wind Velocity (MPH)

^aParameter code not permanently assigned.

Table 2.—*Statistical code list for daily data*

<i>Statistic Code</i>	<i>Description</i>
00001	Maximum value for each day.
00002	Minimum value for each day.
00003	Mean value for each day.
00004	A.M. (Reading obtained during morning hours)
00005	P.M. (Reading obtained during afternoon hours)
00011	Once daily (random hour)
30600	Instantaneous observations=30000 + hour
32145	For example:
	<i>Hour</i> <i>Code</i>
	0600 (a.m.) 30600
	0945 (p.m.) 32145

- | | |
|-------------------|---|
| 3. PARM CODE | See table 1. |
| 4. STAT CODE | See table 2. |
| 5. BEGIN YEAR MO. | The beginning year and month that data are available. January is month '01'; December is month '12'. |
| 6. END YEAR MO. | The ending year and month that data are available. |
| 7. NO. DAYS | The number of days for which data are available for the indicated dates. This indicates whether or not the data are complete. |
| 8. YEARS | The number of complete water years for which data are available. A water year begins on October 1 and ends on September 30. |
| 9. MAXIMUM | The maximum value recorded for the parameter and statistic for the dates shown. |
| 10. MINIMUM | The minimum value recorded for the parameter and statistic for the dates shown. |

RETRIEVAL OPTIONS

Daily data may be retrieved using station numbers in one of two ways: (1) by individual station numbers and (2) by a range of station numbers described by a beginning and ending station number.

In addition to the retrieval options outlined above, others are available. They are:

1. All data may be retrieved for a site or the retrieval may be restricted to a list of those parameter codes desired. See table 1 for a list of parameter codes that are available in this file.
2. Data for the entire period of record may be retrieved for a site or only for a specific period described by a beginning year and month and an ending year and month.

A typical request might be to retrieve all streamflow (discharge) data for a particular river basin for 1940–70. The request then should contain the station numbers of the farthest upstream station and the station at downstream end of the basin, the parameter code 00060(streamflow), a statistic code of 00003 (mean) and the dates January 1940 to December 1970. The available data that meets this criteria will then be furnished to the requester.

DATA FORMATS

Data may be retrieved in machine-readable form as: (1) punch cards or card images on magnetic tape (2) a 336-byte magnetic tape format usable by most computers or (3) a 1,636-byte magnetic tape format usable on IBM 360 and 370 series computers. Each of these formats are described in detail below. The magnetic tapes may be either 7-track (even or odd parity) or 9-track (odd parity) 556 or 800 bits per inch (7-track), and 800 or 1,600 bits per inch (9-track). The requester must specify his output requirements in detail. Punched card output is not desirable for response to requests for large volumes of data because of the handling and mailing difficulties associated with masses of cards.

CARD OUTPUT FORMAT

Three types of cards are associated with the retrieval of daily data; a code card, a name card, and a data card. The descriptions of these cards are given in figures 2, 3, and 4.

336-BYTE MAGNETIC TAPE OUTPUT FORMAT

Data may be retrieved and written onto an IBM-compatible magnetic tape, 1/2 inch wide, 2,400 feet long, 7-track, 556 or 800 bits per inch, even or odd parity, in 6-bit BCD (binary coded decimal) in a 336-byte format.

Each record is 1 month of data. This record length of 336-bytes is divisible by 4, 6, and 8 to fit the word lengths of most other computers. The description of this format is given in figure 5.

1,636-BYTE MAGNETIC TAPE OUTPUT FORMAT

Data may be retrieved and written onto an IBM magnetic tape, 1/2 inch wide, 2,400 feet long, 9-track, 800 or 1,600 bits per inch, odd parity, in fixed binary form, in a 1,636-byte format. Each record is 1 water year of data. The description of this format is given in figure 6.

DAILY TABLES

In addition, computer printouts may be requested of daily data in tabular form. An example of a daily table is shown in figure 7.

336-byte Magnetic Tape Output Format

<i>Byte Position</i>	<i>Number of BCD Characters</i>	<i>Description</i>
1	15	Station identification number.
16	7	Cross section location. Value of 999999 indicates no cross section location has been stored.
23	7	Sampling depth. Value of 999999 indicates no sampling depth has been stored. Top depth values stored with code 111111, and bottom depth values stored with code 888888.
30	5	Parameter code.
35	4	Calendar year date.
39	2	Month designation. '01' is January; '12' is December.
41	5	Statistic code.
46	7	No value indicator. Value that is stored in the record in place of a missing daily value.
53	217	Daily values. Thirty-one daily values with each value seven characters in length. Decimal point is punched when applicable.
270	2	Code for the State in which the station is located.
272	2	Code for the State in which the Geological Survey office that operates the station is located.
274	48	Station name.
322	7	Drainage area (square miles). A value of '0' indicates no value stored.
329	8	Reserved space.

Figure 5.—The 336-byte format.

1,636-byte Magnetic Tape Output Format

<i>Byte Position</i>	<i>Number of BCD Characters</i>	<i>Description</i>
1	Character (1)	Blank.
2–16	Character (15)	Station identification number.
17–20	Float (6)	Cross section location. Value of 999999 indicates no cross section location has been stored.
21–24	Float (6)	Sampling depth. Value of 999999 indicates no sampling of depth has been stored. Top depth values stored with code 111111, and bottom depth values stored with code 888888.
25–28	Fixed binary (31)	Parameter code.
29–30	Fixed binary (15)	Water year date. A water year begins in October and ends in September; the water year 1971 begins October 1, 1970 and ends September 30, 1971.
31–32	Fixed binary (15)	Statistic code.
33–36	Float (6)	No value indicator. Value that is stored in the record in place of a missing daily value.
37–1524	Float (6)	The daily data stored in an array 12 (months) by 31 (days). Note that the data are stored in the array by month number (01 to 12) but the data for months 10, 11, and 12 (October, November and December) are for the previous calendar year date.
1525–1526	Fixed binary (15)	Code for the State in which the station is located.
1527–1528	Fixed binary (15)	Code for the State in which the Geological Survey office that operates the station is located.
1529–1576	Character (48)	Station name.
1577–1580	Float (6)	Drainage area (square miles). A value of '0' indicates no value stored.
1581–1636	Character (56)	Reserved space.

Figure 6.—The 1,636-byte format.

Figure 7.—Sample of daily data.

USER CHARGES

The data requester will be billed the computer charges associated with the preparation of data in response to his request. There are many variables associated with estimating these charges in advance. Some of the factors are: 1) the amount of data requested 2) the output format selected 3) the timeframe required by the requester and 4) whether or not the requester provides the magnetic tape onto which the data are copied.

A general rule of thumb to determine charges would be to estimate \$0.20 per station year for output on cards, \$0.10 per station year for output on 7-track magnetic tape (336-byte format) and \$0.05 per station year for output on 9-track magnetic tape (1,636-byte format). Computer printout (tables) cost approximately \$0.20 per table (station year).

The cost for individual requests can vary considerably from these estimates. The estimates do not include the cost of any magnetic tapes required. A minimum charge of \$10.00 will be made for each request.

HOW TO OBTAIN THE DATA

When requesting daily data, the requester should state his needs clearly and be specific. This includes both the identification of items that he expects to receive from the file and output format that meets his requirements. All inquiries or requests relating to the "Index to U.S. Geological Survey Computer Files Containing Daily Values of Water Parameters to September 30, 1971" should be addressed to:

Chief Hydrologist
U.S. Geological Survey
Washington, D.C. 20244

STATION LIST

The stations shown in the following computer printouts are listed according to station number within each State. The States are in alphabetical order.

	Page		Page
Connecticut	12	New Hampshire	139
Delaware	25	New Jersey	144
District of Columbia	29	New York	167
Illinois	30	Ohio	206
