<u>Volume per unit time (flow)</u>		
gallon per minute (gal/min)	0.06309	liter per second (L/s)

HYDROGEOLOGIC DATA FOR THE EAGLE RIVER-CHUGIAK AREA, ALASKA

By Paula Johnson

ABSTRACT

Water for the Eagle River-Chugiak area is provided by private, subdivision and trailer court wells. Data from these wells were studied to determine aquifer materials, yield, well depth and depth to water.

The aquifer material is unconsolidated glacial or alluvial gravel and sand and bedrock from the McHugh Complex, the unnamed metamorphic complex and the Kenai Formation. The median well yield for bedrock wells is 2 gallons per minute and the median well yield for wells completed in unconsolidated aquifers is 10 gallons per minute. Well depths may vary widely where wells are drilled into bedrock or glacial till but are more uniform where wells are drilled into alluvial gravels and sand. A continuous water table is not defined in the Eagle River-Chugiak area.

INTRODUCTION

The Eagle River-Chugiak community is a rapidly developing residential and commercial area within the Municipality of Anchorage (fig. 1). Water for residences and businesses is supplied principally by individual private wells. A few subdivisions and mobile-home courts have local water-distribution systems that obtain water from large-capacity wells yielding as much as 326 gal/min (gallons per minute). As the population increases, ground water will be further developed to meet increased demands. Planning for this development will benefit from an up-to-date base of hydrologic data. This report, produced in cooperation with the Municipality of Anchorage, provides an update of well data contained in a report by Zenone, Schmoll, and Dobrovolny (1974).

Data in this report are presented using two formats. The first is a table listing well data that are pertinent to defining ground-water availability for the Eagle River-Chugiak area (table 1). The second is a set of two maps, sheets 1 and 2, depicting the information listed in the table. Incompleteness of some well records has resulted in some wells being shown on one map but not the other. For example, if well depth and water level data are missing, but type of aquifer and depth to bedrock are known, the well is plotted on the map of Aquifer Material, Depth of Bedrock and Yield (sh. 1) but not on the map of Well Depth and Depth to Water Map (sh. 2). Data presented in this report were obtained from drillers' logs and from information provided by local residents.

EXPLANATION OF TABLE ENTRIES

Local Number is derived from the official rectangular subdivision of public lands (fig. 2). The first letter indicates the Seward baseline and principal meridian, and the second letter represents the quadrant formed by the intersection of the baseline and the principal meridian in which the well is located (fig. 2). The first three digits indicate the township in which the well is located, the next three digits the range, and the next two, the section. Letters following the section number indicate the $\frac{1}{4} \times \frac{1}{4}$ subdivisions of the section. Each of these successively smaller subdivisions is lettered counterclockwise beginning at the northeast corner (fig. 2). The next digit is a sequential number assigned to distinguish between wells that fall within the same site.

Map Number (the last three digits in the Local Number) is the reference number that identifies well sites on the map. At the scale of many maps, it is not possible to plot two or more wells that lie within 100 feet of one another. Therefore, map numbers are assigned to the 2.5-acre parcel of land ($\frac{1}{4} \times \frac{1}{4}$ section) on which the well is located. The map numbers are assigned sequentially within each section. In the example used, this was the first well site to be plotted

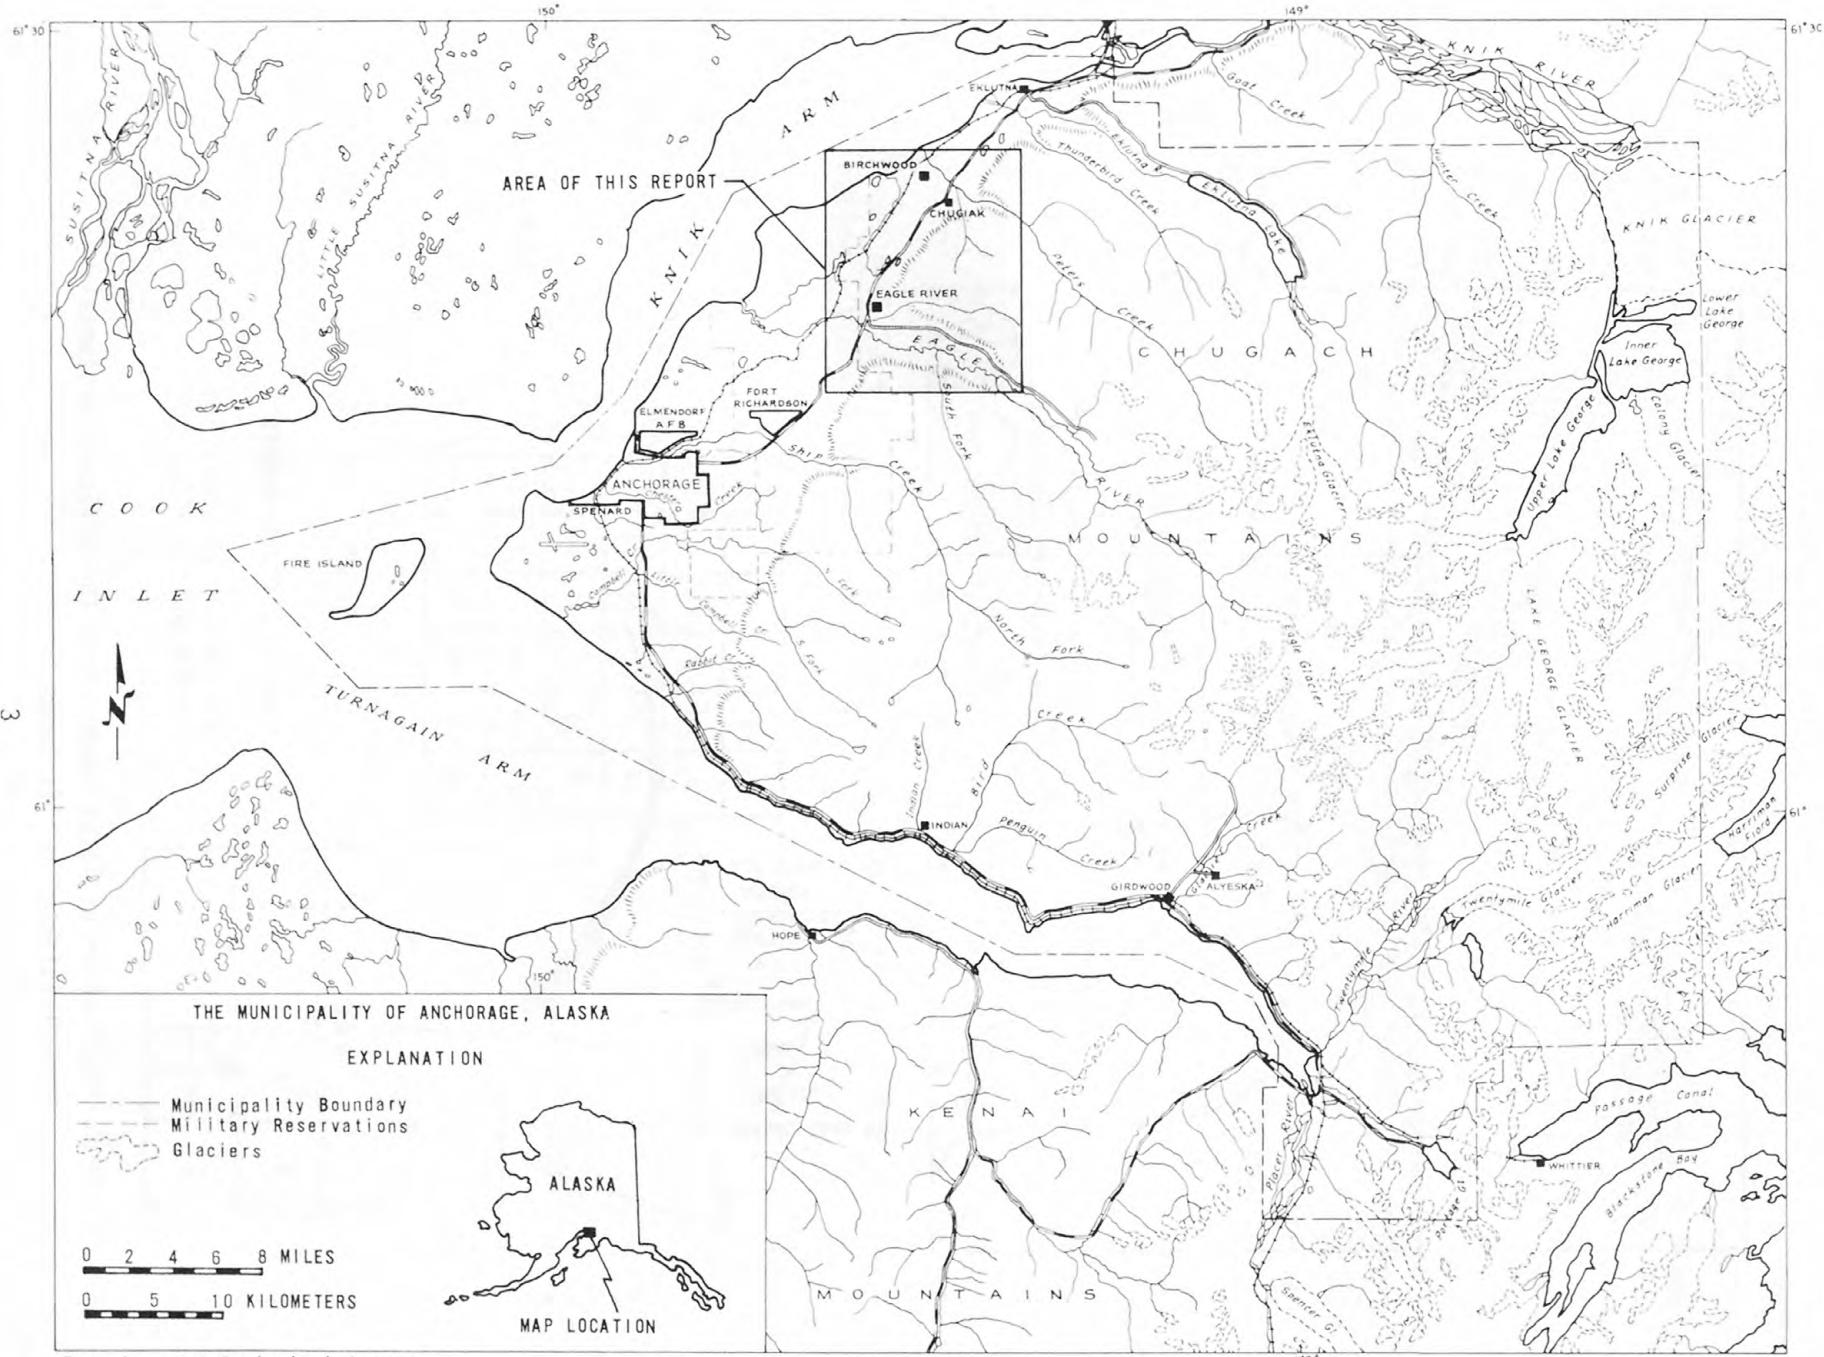

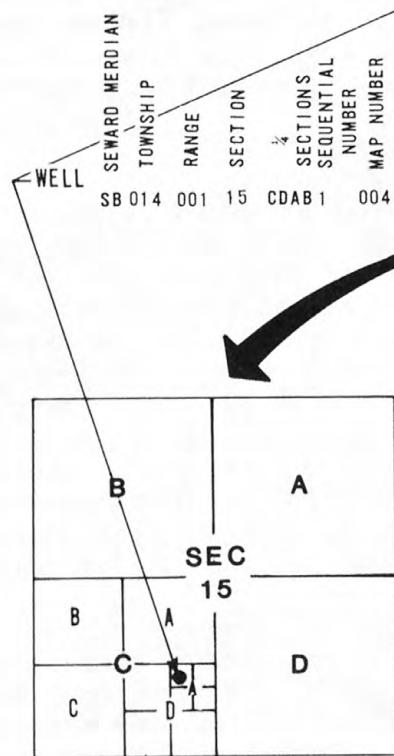

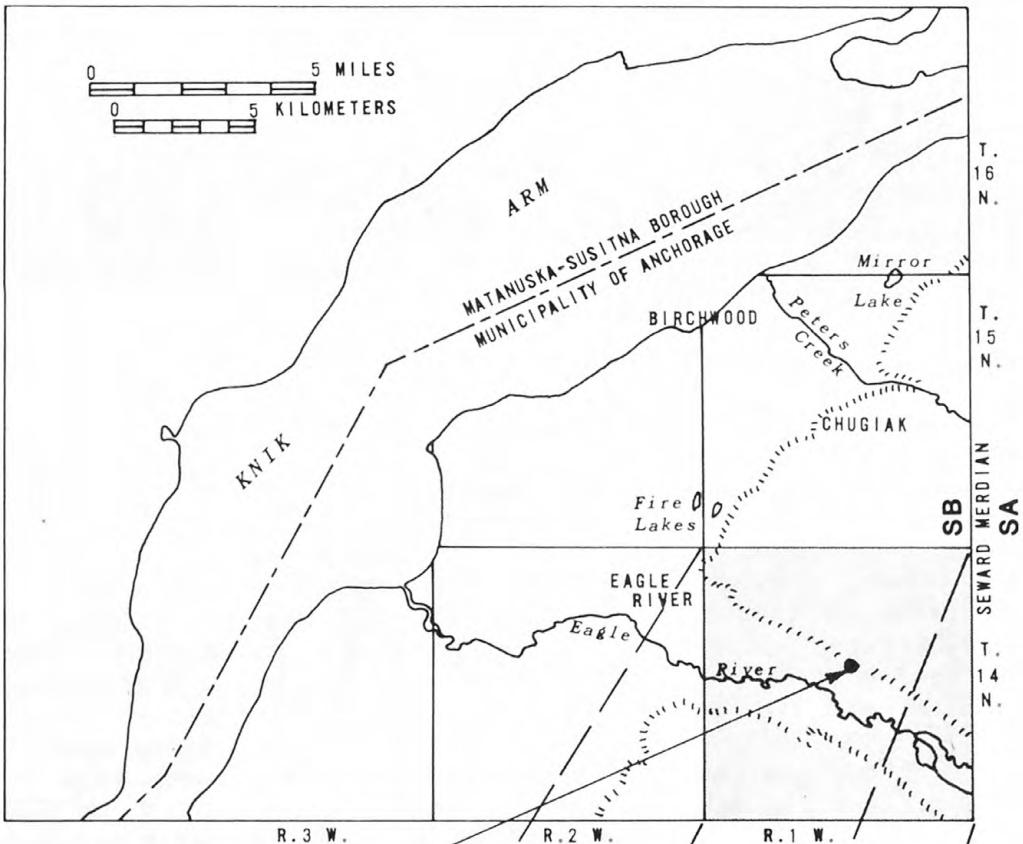

Figure 1.-- Location of report area within the Municipality of Anchorage and State of Alaska.

6	5	4	3	2	1
7	8	9	10	11	12
18	17	16	15	14	13
19	20	21	22	23	24
30	29	28	27	26	25
31	32	33	34	35	36

Figure 2.--Derivation of local number from the official rectangular subdivision of public lands.

in section 15; it was given the number 1. Other wells on the same 2.5-acre parcel will, therefore, have the same map number, but will be differentiated by their sequential numbers.

The computer stores map numbers as three digits. However, on the maps accompanying this report (shs. 1 and 2) the initial zeroes are dropped. For example, where the table indicates a site number as 015, the map shows it as 15. The map number is unique to each 1-mile square section. To find information in the table for a mapped site, readers will need to use the appropriate township, range and section numbers.

Water Level (in feet below land surface) is the reported depth to water in the completed well. A negative number indicates water level above land surface.

Depth of Well (in feet below land surface) is the depth of the finished well.

Yield (in gallons per minute) is the reported rate at which the driller pumped the well during development.

Zone (in feet below land surface) is the interval between top and bottom of aquifer.

Unit Identifier is the code designated for formal geologic formations. (See table 1.)

Lithology is the dominant geologic material of a formation. (See table 1.)

Lithologic Modifier is a secondary descriptor of a formation indicated under Lithology. (See table 1.)

Depth to Bedrock (in feet below land surface) is the reported depth to top of bedrock and represents the thickness of unconsolidated materials.

An explanation of computer-stored abbreviations used in table 1.

UNIT IDENTIFIER

<u>Computer Symbols</u>	<u>Explanation</u>
110 QRNR	Quaternary deposits
120 KENI	Kenai Formation
BEDROCK	Bedrock of unknown lithology

LITHOLOGY AND LITHOLOGIC UNIT MODIFIERS

<u>Computer Symbols</u>	<u>Explanation</u>
ALVM	Alluvium
ARGL, ARGLT	Argillite
BLDRS	Boulders
CBBL	Cobble
CLAY	Clay
CLSN	Claystone
COAL	Coal
FRIB	Friable
GRVL	Gravel
HP	Hardpan generally mixed clay and rock
INDURAT	Indurated
MMPC	Undifferentiated metamorphic rocks
OTSH	Outwash
QTZ	Quartz
SAND	Sand
SDGL	Sand and gravel
SDSL	Sandstone and shale
SHLE	Shale
SILT	Silt
SLSN, SLSTNE	Siltstone
SLTE	Slate
SNDS, SS	Sandstone
STRNGRS	Stringers
TILL	Till
WB, W-B	Water-bearing
