Base from U.S. Geological Survey digital data.
1:200,000, 1975. The soil information used for this map was the Soil Conservation Service Wall STAG data. STAG was compiled at 1,200,000 and designed to be used primarily for regional, multibasin, basin and microbasin resource planning, management, and monitoring. The results presented on this map are general in nature and should not be applied on a site-specific or local basis.

Mapping units with highest proportion of soils sensitive to pesticide leaching, Ohio
