

ERRATA

After publication, an error was found in Water-Resources Investigations Report 00-4029--A *precipitation-runoff model for analysis of the effects of water withdrawals on streamflow, Ipswich River Basin, Massachusetts*, by P.J. Zarriello and K.G. Ries, III.

The 30-day, low-flow frequency curve shown for the simulation of no withdrawals and 1991 land use was incorrect (fig. 27C). The 30-day, low-flow frequency curve for the simulation of no withdrawals and 1991 land use should range from about 4.1 ft³/s at the 100 year recurrence interval to 25 ft³/s at about the 1-year recurrence interval. Figure 27 has been revised with the correct 30-day, low-flow frequency curve. Text on page 69, second column, second paragraph, third sentence should read: At the South Middleton station, flows ranged from about 4.1 ft³/s and 4.7 ft³/s at the 100-year recurrence interval to 25 ft³/s and 21 ft³/s at about the 1-year recurrence interval for simulation with (1) no withdrawals with 1991 land-use conditions, and (2) no withdrawals and undeveloped land-use conditions, respectively.

We apologize for any inconvenience that this error may cause.
