Sediment concentrations: Maximum daily, 4,500 mg/l June 23, 1965; minimum daily, 1 mg/l on many days of most years.

Sediment loads: Maximum daily, 64,000 tons Aug. 5, 1965; minimum daily, 0.04 ton Apr. 2, 1969.

REMARKS. --Chemical analyses for this station in "Analyses of Samples Collected at Water-Quality Partial-Record Stations in Hawaii and Other Pacific Areas." The sediment concentrations and loads during the year were higher than normal because clearing and scraping of the watershed about 1 mile upstream from the station for dam construction resulted in more than usual amounts of sediment being carried downstream.

## 16884600 AHA-GAWA AT AHA

LOCATION. --Lat 26°42'41" N., long 128°16'55" E., Okinawa, at gaging station 0.3 mile southwest of Aha School and 1.4 miles upstream from mouth.

DRAINAGE AREA. --9.5 sq mi, approximately.

PERIOD OF RECORD. --Chemical analyses: October 1967 to September 1969 (partial records).

Water temperatures: March 1968 to September 1969.

Sediment records: March 1968 to September 1969.

## EXTREMES. --1968-69:

Water temperatures: Maximum, 30.0°C Aug. 27; minimum, 11.0°C on several days during December, January and March.

Sediment concentrations: Maximum daily, 1,900 mg/l Aug. 20; minimum daily, 2 mg/l on many days.

Sediment loads: Maximum daily, 19,700 tons Aug. 20; minimum daily, 0.01 ton on many days.

## Period of record:

Water temperatures: Maximum, 31.0°C Aug. 17, 1968; minimum, 11.0°C on several days in 1968-69.

Sediment concentrations: Maximum daily, 1,900 mg/l Aug. 20, 1969; minimum daily, 1 mg/l on many days in 1968.

Sediment loads: Maximum daily, 19,700 tons Aug. 20, 1969; minimum daily, less than 0.05 ton on several days in 1968.

REMARKS. --Chemical analyses for this station in "Analyses of Samples Collected at Water-Quality Partial-Record Stations in Hawaii and Other Pacific Areas." The sediment concentrations and loads during the year were higher than normal because clearing and grading of the watershed just upstream from the station for a dirt road resulted in more than usual amounts of sediment being carried downstream.
