## PREFACE

This report was prepared by the U.S. Geological Survey in cooperation with the States of Alaska, Idaho, Montana, Oregon, Washington, Wyoming, Bureau of Reclamation, and with other agencies, by personnel of the Water Resources Division, J. S. Cragwall, Jr., chief hydrologist, G. W. Whetstone, assistant chief hydrologist for Scientific Publications and Data Management, under the general direction of G. A. Billingsley, chief, Reports Section, and B. A. Anderson, chief, Data Reports Unit.

The data were collected under the supervision of the district chiefs of the Water Resources Division, as follows:

|                      |                   |
|----------------------|-------------------|
| W. L. Burnham.....   | Boise, Idaho      |
| R. L. Cushman.....   | Cheyenne, Wyo.    |
| Harry Hulsing .....  | Anchorage, Alaska |
| S. F. Kapustka ..... | Portland, Oreg.   |
| L. B. Laird.....     | Tacoma, Wash.     |
| M. M. Miller.....    | Honolulu, Hawaii  |
| G. M. Pike .....     | Helena, Mont.     |

## CONTENTS

|  |      |
|--|------|
|  | Page |
| Preface.....   | III  |
| List of Water-Quality stations, in downstream order, for which<br>records are published..... | VII  |
| Introduction.....  | 1    |
| Collection and examination of data.....  | 3    |
| Chemical quality.....  | 4    |
| Temperature.....   | 4    |
| Sediment.....  | 4    |
| Expression of results.....   | 5    |
| Composition of surface waters.....   | 7    |
| Mineral constituents in solution.....  | 9    |
| Silica.....  | 9    |
| Aluminum.....  | 9    |
| Iron.....  | 9    |
| Manganese.....   | 9    |
| Calcium.....   | 9    |
| Magnesium.....   | 9    |
| Sodium and potassium.....  | 9    |
| Bicarbonate, carbonate and hydroxide.....  | 10   |
| Sulfide.....   | 10   |
| Sulfate.....   | 10   |
| Chloride.....  | 10   |
| Fluoride.....  | 10   |
| Bromide.....   | 11   |
| Iodide.....  | 11   |
| Nitrogen.....  | 11   |
| Nitrite.....   | 11   |
| Nitrate.....   | 11   |
| Phosphorous.....   | 12   |
| Boron.....   | 12   |
| Dissolved solids.....  | 12   |
| Arsenic.....   | 12   |
| Barium.....  | 12   |
| Cadmium.....   | 12   |
| Chromium.....  | 13   |
| Cobalt.....  | 13   |
| Copper.....  | 13   |
| Lead.....  | 13   |
| Lithium.....   | 14   |
| Mercury.....   | 14   |
| Nickel.....  | 14   |
| Strontium.....   | 14   |
| Zinc.....  | 14   |
| Properties and characteristics of water.....   | 14   |
| Dissolved solids.....  | 14   |
| Hardness.....  | 15   |
| Acidity.....   | 15   |
| Sodium adsorption ratio.....   | 15   |
| Specific conductance.....  | 16   |
| Hydrogen-ion concentration.....  | 16   |
| Temperature.....   | 16   |
| Color.....   | 17   |
| Turbidity.....   | 17   |
| Density.....   | 17   |
| Dissolved oxygen.....  | 17   |
| Chemical oxygen demand.....  | 17   |
| Biochemical oxygen demand.....   | 18   |
| Biological and microbiological information.....  | 18   |

|  |      |

# QUALITY OF SURFACE WATERS OF THE UNITED STATES, 1969

PARTS 12-16

## INTRODUCTION

The water-quality investigations of the United States Geological Survey are concerned with chemical and physical characteristics of surface- and ground-water supplies of the Nation. The data herein deal with the amounts of matter in solution and in suspension in streams, and represent that portion of the National Water Data System collected by the U.S. Geological Survey in cooperation with State, municipal, and other Federal agencies.

The records of chemical analysis, water temperature, and suspended sediment of surface waters given in this volume serve as a basis for determining the suitability of waters for various uses. The flow and water quality of a stream are related to variations in rainfall and other forms of precipitation. In general, lower concentrations of dissolved solids may be expected during periods of high flow than during periods of low flow. Conversely, the suspended solids in some streams may change materially with relatively small variations in flow, whereas for other streams the quality of the water may remain relatively uniform throughout large ranges in discharge.

The Geological Survey has published annual records of chemical quality, water temperature, and suspended sediment since 1941. The records prior to 1948 were published each year in a single volume for the entire country, and in two volumes in 1948 and in 1949. From 1950 to 1958, the records were published in 4 volumes; from 1959 to 1963 in 5 volumes; from 1964 to 1967 in 6 volumes; and in 1968 in 10 volumes. The drainage basins covered by the 10 volumes are shown in Figure 1. The shaded area in Figure 1 represents the section of the country covered in this volume for the water year 1969 (October 1, 1968 to September 30, 1969).

To meet interim requirements, water-quality records have been released by the Geological Survey in annual reports, beginning with the 1964 water year, by State. These reports are entitled, "Water Resources Data for (State), Part 2. Water Quality Records." Distribution of these reports is limited and primarily for local needs. Any revisions or corrections found necessary to the records published in these annual State reports have been made and published in this volume without reference.

The records herein are listed by drainage basins in a downstream direction along the main stream. All stations on a tributary entering above a mainstream station are listed before that station. A station on a tributary that enters between two mainstream stations is listed between them. A similar order is followed in listing stations on first rank, second rank, and other ranks of tributaries. In the list of water-quality stations in the front of this volume, the rank of the tributaries is indicated by an indentation. Each indentation represents one rank.

As an added means of identification, a station number has been assigned for each stream location where regular measurements of water quantity or quality have been made. The numbers have been assigned to conform with the standard downstream order of listing gaging stations. The numbering system consists of an 8-digit number, such as 12010000. The first 2 digits, "12" identifies the Part or hydrologic region used by the Geological Survey for reporting hydrologic data. The next 6 digits is the

station number which represents the location of the station in the standard downstream order within each of the 16 parts (fig. 1). The complete number (12010000) appears just to the left of the station name. The assigned numbers are in numerical order but are not consecutive. Gaps are left in the numbers to allow for new stations that may be established.

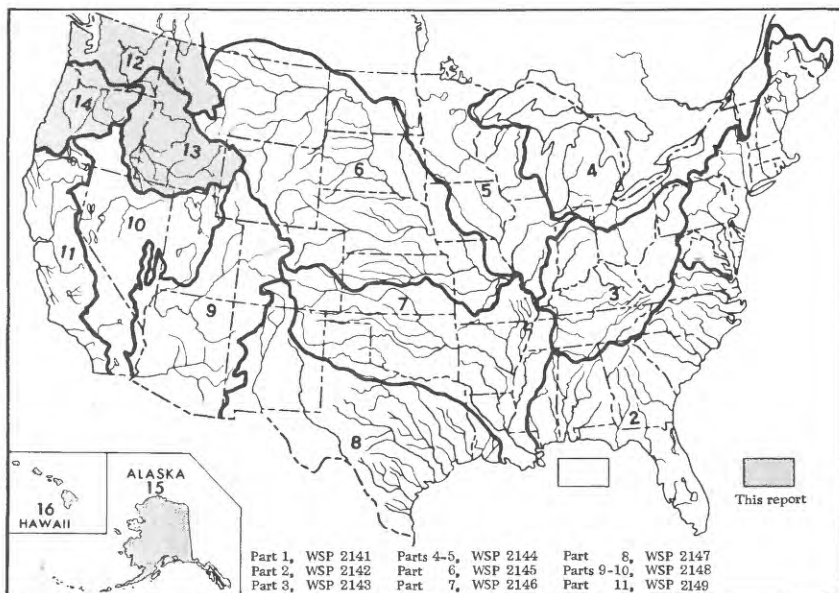

Figure 1.--Map of the United States showing basins covered by the 10 water-supply papers on quality of surface waters in 1969. The shaded part represents the section of the country covered by this volume; the unshaded part represents the section of the country covered by other water-supply papers.

Descriptive statements are given for each sampling station where chemical analyses, temperature measurements, or sediment determinations have been made. These statements include location of the station, drainage area, periods of records available, extremes of dissolved solids, hardness, specific conductance, temperature, sediment loads, and other pertinent data. Records of discharge of the streams at or near the sampling station are included in most tables of analyses.

During the water year ending September 30, 1969, the Geological Survey maintained 261 stations on 182 streams for the study of chemical and physical characteristics of surface water. Samples were collected daily and monthly at 120 of these locations for chemical-quality studies. Samples also were collected less frequently at many other points. Water temperatures were measured continuously at 140 and daily at 23 stations. All surface water samples collected and analyzed during the year have not been included. Single analyses made of daily samples before compositing have not been reported. Specific conductance is determined and reported for almost all daily samples.

At chemical-quality stations where data are continuously recorded at the stream site (monitors), the records consist of daily maximum, minimum, and mean values for each constituent measured. More detailed records (hourly values) may be obtained by writing the district office listed under Division of Work on page 22.

Quantities of suspended sediment are reported for 40 stations during the year ending September 30, 1969. Sediment samples were collected one or more times daily at most stations, depending on the rate of flow and changes in stage of the stream. Particle-size distributions of sediments were determined at 16 stations.

Some of the stations for which data are published in this volume are included in special networks and programs. These stations are identified by their title, set in parentheses, under the station name.

Hydrologic bench-mark station is one that provides hydrologic data for a basin in which the hydrologic regimen will likely be governed solely by natural conditions. Data collected at a bench-mark station may be used to separate effects of natural from manmade changes in other basins which have been developed and in which the physiography, climate, and geology are similar to those in the undeveloped bench-mark basin.

International Hydrological Decade (IHD) River Stations provide a general index of runoff and materials in the water balance (discharge of water, and dissolved and transported solids) of the world. In the United States, IHD Stations provide indices of runoff and the general distribution of water in the principal river basins of the conterminous United States and Alaska.

Irrigation network stations are water-quality stations located at or near certain streamflow gaging stations west of the main stem of the Mississippi River. Data collected at these stations are used to evaluate the chemical quality of surface waters used for irrigation and the changes resulting from the drainage of irrigated lands. Prior to water year 1966, these data were published in the annual water-supply paper series, "Quality of Surface Waters for Irrigation, Western States."

Pesticide program is a network of regularly sampled water-quality stations where additional monthly samples are collected to determine the concentration and distribution of pesticides in streams whose waters are used for irrigation or in streams in areas where potential contamination could result from the application of the commonly used insecticides and herbicides.

Radiochemical program is a network of regularly sampled water-quality stations where additional samples are collected twice a year (at high and low flow) to be analyzed for radioisotopes. The streams that are sampled represent major drainage basins in the conterminous United States.

## COLLECTION AND EXAMINATION OF DATA

Quality of water stations usually are located at or near points on streams where streamflow is measured by the U.S. Geological Survey. The concentration of solutes and sediments at different locations in the stream-cross section may vary widely with different rates of water discharge depending on the source of the material and the turbulence and mixing of the stream. In general, the distribution of sediment in a stream section is much more variable than the distribution of solutes. It is necessary to sample some streams at several verticals across the channel and especially for sediment, to uniformly traverse the depth of flow. These measurements require special sampling equipment to adequately integrate the vertical and lateral variability of the concentration in the section. These procedures yield a velocity-weighted mean concentration for the section.

The near uniformly dispersed ions of the solute load move with the velocity of the transporting water. Accordingly, the mean section concentration of solutes determined from samples is a precise measure of the total solute load. The mean section concentration obtained from suspended sediment samples is a less precise measure of the total sediment load, because the sediment samplers do not traverse the bottom 0.3 foot of the sampling vertical where the concentration of suspended sediment is greatest and because a significant part of the coarser particles in many streams move in essentially continuous contact with the bed and are not represented in the suspended sediment sample. Hence, the computed sediment loads presented

in this report are usually less than the total sediment loads. For most streams the difference between the computed and total sediment loads will be small, in the order of a few percent.

## CHEMICAL QUALITY

The methods of collecting and compositing water samples for chemical analysis are described by Brown, Skougstad, and Fishman (1970). No single method of compositing samples is applicable to all problems related to the study of water quality. Composites are made on the basis of dissolved-solids content as indicated by measurements of conductivity of daily samples, supplemented by other information such as chloride content, river stage, weather conditions and other background information of the stream.

## TEMPERATURE

Daily water temperatures were measured at most of the stations at the time samples were collected for chemical quality or sediment content. So far as practicable, the water temperatures were taken at about the same time each day. Large streams have a small diurnal temperature change while small, shallow streams may have a daily range of several degrees and may follow closely the changes in air temperature. Some streams may be affected by waste-heat discharges.

At stations where continuously recording thermographs are present, the records consist of maximum and minimum temperatures for each day, and the monthly averages.

## SEDIMENT

In general, suspended-sediment samples were collected daily with depth-integrating samplers (U.S. Inter-Agency, 1963). At some stations, samples were collected at a fixed sampling point at one vertical in the cross section. Depth-integrated samples were collected periodically at three or more verticals in the cross section to determine the cross-sectional distribution of the concentration of suspended sediment with respect to that at the daily sampling vertical. In streams where transverse distribution of sediment concentration ranged widely, samples were taken at two or more verticals to define more accurately the average concentration of the cross section. During periods of high or rapidly changing flow, samples generally were taken several times a day and, in some instances, hourly.

Sediment concentrations were determined by filtration-evaporation method. At many stations the daily mean concentration for some days was obtained by plotting the velocity-weighted instantaneous concentrations on the gage-height chart. The plotted concentrations, adjusted if necessary, for cross-sectional distribution were connected or averaged by continuous curves to obtain a concentration graph. This graph represented the estimated velocity-weighted concentration at any time, and for most periods daily mean concentrations were determined from the graph. The days were divided into shorter intervals when the concentration or water discharge were changing rapidly. During some periods of minor variation in concentration, the average concentration of the samples was used as the daily mean concentration. During extended periods of relatively uniform concentration and flow, samples for a number of days were composited to obtain average concentrations and average daily loads for each period. (See Expression of Results, p. 5.)

For periods when no samples were collected, daily loads of suspended sediment were estimated on the basis of water discharge, sediment concentrations observed immediately before and after the periods, and suspended-sediment loads for other periods of similar discharge. The estimates were further guided by precipitation records and sediment discharge at other stations in the same or adjacent basins.

In many instances where there were no observations for several days, the suspended-sediment loads for individual days were not estimated, because numerous factors influencing the quantities of transported sediment made it very difficult to make accurate estimates for individual days. However, estimated loads of suspended sediment for missing days in an otherwise continuous period of sampling have been included in monthly and annual totals in order to provide a complete record. For some streams, samples were collected weekly, monthly, or less frequently, and only rates of sediment discharge at the time of sampling are shown.

In addition to the records of quantities of suspended sediment transported, records of particle sizes of sediment are included. The particle sizes of suspended sediment for many of the stations, and the particle sizes of the bed material for some of the stations were determined intermittently.

The size of particles carried in suspension by streams commonly ranges from colloids (finer than about 0.24 microns) to coarse sand (2.0 mm). The common methods of particle-size analysis cannot accommodate such a wide range. Hence, it was necessary to separate most samples into two parts, that part coarser than 0.062 mm and that part finer than 0.062 mm. The separations were made by sieve or by fall velocity technique. The coarse fractions were classified by sieve separation or by visual-accumulation tube (U.S. Inter-Agency, 1957). The fine fractions were classified by the pipet method (Kilmer and Alexander, 1949) or the bottom withdrawal tube method (U.S. Inter-Agency, 1943).

## EXPRESSION OF RESULTS

The quantities of solute concentrations analyzed in the laboratory are measured in either milligrams per liter or micrograms per liter. Milligrams per liter (mg/l, MG/L) is a unit which represents the weight of solute per unit volume of water. A microgram per liter (ug/l, UG/L) is one thousandth of a milligram per liter.

Milliequivalents per liter are not reported but they can be converted easily from milligrams per liter data. A milliequivalent per liter (me/l) is one thousandth of a gram equivalent weight of a constituent. Chemical equivalence in milliequivalents per liter can be obtained by (a) dividing the concentration in milligrams per liter by the combining weight of that ion, or (b) by multiplying the concentration (in mg/l) by the reciprocals of the combining weights. Table 1 on page 6, lists the reciprocals of the combining atomic weights based on carbon-12 (International Union of Pure and Applied Chemistry, 1961).

The hardness of water is conventionally expressed in all water analyses in terms of an equivalent quantity of calcium carbonate. Such a procedure is required because hardness is caused by several different cations, present in variable proportions. It should be remembered that hardness is an expression in conventional terms of a property of water. The actual presence of calcium carbonate in the concentration given is not to be assumed. The hardness caused by calcium and magnesium (and other cations if significant) equivalent to the carbonate and bicarbonate is called carbonate hardness; the hardness in excess of this quantity is called noncarbonate hardness. Hardness or alkalinity values expressed in milligrams per liter as calcium carbonate may be converted to milliequivalents per liter by dividing by 50.

The value usually reported as dissolved solids is the residue on evaporation after drying at 180°C for 1 hour. For some waters, particularly those containing moderately large quantities of soluble salts, the value reported is calculated from the quantities of the various determined constituents using the carbonate equivalent of the reported bicarbonate. The calculated sum of the constituents may be given instead of or in addition to the residue. In the analyses of most waters used for irrigation, the quantity of dissolved solids is given in tons per acre-foot as well as in milligrams per liter.

Table 1.--Factors for conversion of chemical constituents in milligrams per liter to milliequivalents per liter

\*Constituent reported in micrograms per liter; multiply by factor and divide results by 1,000.

Specific conductance is given for most analyses and was determined by means of a conductance bridge and using a standard potassium chloride solution as reference. Specific conductance values are expressed in micromhos per centimeter at 25°C. Specific conductance in micromhos is 1 million times the reciprocal of specific resistance at 25°C. Specific resistance is the resistance in ohms of a column of water 1 centimeter long and 1 square centimeter in cross section.

The discharge of the streams is reported in cubic feet per second (see Streamflow, p. 19) and the temperature in degrees Celsius (°C). Color is expressed in units of the platinum-cobalt scale proposed by Hazen (1892). A unit of color is produced by one milligram per liter of platinum in the form of the chloroplatinate ion. Hydrogen-ion concentration is expressed in terms of pH units. By definition the pH value of a solution is the negative logarithm of the concentration of gram ions of hydrogen.

An average of analyses for the water year is given for most daily sampling stations. Most of these averages are arithmetical, time-weighted, or discharge-weighted; when analyses during a year are all on 10-day composites of daily samples with no missing days, the arithmetical and time-weighted averages are equivalent. A time-weighted average represents the composition of water that would be contained in a vessel or reservoir that had received equal quantities of water from the river each day for the water year. A discharge-weighted average approximates the composition of water that would be found in a reservoir containing all of the water passing a given station during the year. A discharge-weighted average is computed by multiplying the discharge for the sampling period by the concentrations of individual constituents for the corresponding period and dividing the sum of the products by the sum of the discharges. For most streams, discharge-weighted averages are lower than arithmetical averages because at times of high discharge the rivers generally have low concentrations of dissolved solids.

A program for computing these averages by digital computer was instituted in the 1962 water year. This program extended computations to include averages for pH values expressed in terms of hydrogen ion and averages for the concentration of individual constituents expressed in tons per day. Concentrations in tons per day are computed the same as daily sediment loads.

The concentration of sediment in milligrams per liter is computed as 1,000,000 times the ratio of the weight of sediment to the weight of water-sediment mixture. Daily

sediment loads are expressed in tons per day and except for subdivided days, are usually obtained by multiplying daily mean sediment concentrations in mg/l by the daily mean discharge in cubic feet per second, and the conversion factor, normally 0.0027.

For those days when the published sediment discharge value differs from the value computed, the reader can assume that the sediment discharge for that day was computed by the subdivided-day method.

Particle-size analyses are expressed in percentages of material finer than classified sizes (in millimeters). The size classification used in this report agrees with recommendations made by the American Geophysical Union Subcommittee on Sediment Terminology. The classification is as follows:

| Classification | Size (mm)       | Method of analysis     |
|----------------|-----------------|------------------------|
| Clay.....      | 0.00024 - 0.004 | Sedimentation          |
| Silt .....     | .004 - .062     | Sedimentation          |
| Sand.....      | .062 - 2.0      | Sedimentation or sieve |
| Gravel.....    | 2.0 - 64.0      | Sieve                  |

The particle-size distributions given in this report are not necessarily representative of all the particle sizes of sediment in transport in the natural stream. Most of the organic matter is removed and the sample is subjected to mechanical and chemical dispersion before analysis in distilled water. Chemical dispersion is not used for native-water analysis (Guy 1969).

Prior to the 1968 water year, data for chemical constituents and concentrations of suspended sediment were reported in parts per million (ppm) and water temperatures were reported in degrees Fahrenheit ( $^{\circ}\text{F}$ ). In October 1967, the U.S. Geological Survey began reporting data for chemical constituents and concentrations of suspended sediment in milligrams per liter (mg/l) and water temperatures are given in degrees Celsius (centigrade,  $^{\circ}\text{C}$ ). In waters with a density of 1.000 g/ml (grams per milliliter), parts per million and milligrams per liter can be considered equal. In waters with a density greater than 1.000 g/ml, values in parts per million should be multiplied by the density to convert to milligrams per liter. (See table 2 on page 8.) Temperature, in degrees Celsius may be converted to degrees Fahrenheit by using the table on page 8.

## COMPOSITION OF SURFACE WATERS

All natural waters contain dissolved mineral matter. The quantity of dissolved mineral matter in a natural water depends primarily on the type of rocks or soils with which the water has been in contact and the length of time of contact. Ground water is generally more highly mineralized than surface runoff because it remains in contact with the rocks and soils for much longer periods. Some streams are fed by both surface runoff and ground water from springs or seeps. Such streams reflect the chemical character of their concentrated underground sources during dry periods and are more dilute during periods of heavy rainfall. The dissolved-solids content in a river is frequently increased by drainage from mines or oil fields, by the addition of industrial or municipal wastes, or--in irrigated regions--by drainage from irrigated lands.

The mineral constituents and physical properties of natural waters reported in the tables of analyses include those that have a practical bearing on water use. The results of analyses generally include silica, iron, calcium, magnesium, sodium, potassium (or sodium and potassium together calculated as sodium), carbonate, bicarbonate, sulfate, chloride, fluoride, nitrate, boron, pH, dissolved solids, and specific conductance. Aluminum, manganese, color, acidity, dissolved oxygen, and other dissolved constituents and physical properties are reported for certain streams. Microbiologic (coliforms) and organic components (pesticides, total organic carbon) and minor elements (arsenic, cobalt, cadmium, copper, lead, mercury, nickel, strontium, zinc, etc.) are determined occasionally for some streams in connection with specific problems and the results are reported. The source and significance of the different constituents and properties of natural waters are discussed in the following paragraphs. The constituents are arranged in the order that they appear in the tables.

Table 2.--Factors for conversion of sediment concentration in milligrams per liter to parts per million\*

\*C = 5/9 (°F - 32) or °F = 9/5 (°C) + 32.

## MINERAL CONSTITUENTS IN SOLUTION

Silica ( $\text{SiO}_2$ )

Silica is dissolved from practically all rocks. Some natural surface waters contain less than 5 milligrams per liter of silica and few contain more than 50 mg/l, but the more common range is from 10 to 30 mg/l. Silica affects the usefulness of a water because it contributes to the formation of boiler scale; it usually is removed from feed water for high-pressure boilers. Silica also forms troublesome deposits on the blades of steam turbines. However, it is not physiologically significant to humans, livestock, or fish, nor is it of importance in irrigation water.

## Aluminum (Al)

Aluminum is usually present only in negligible quantities in natural waters except in areas where the waters have been in contact with the more soluble rocks of high aluminum content such as bauxite and certain shales. Acid waters often contain large amounts of aluminum. It may be troublesome in feed waters where it tends to be deposited as a scale on boiler tubes.

## Iron (Fe)

Iron is dissolved from many rocks and soils. On exposure to air, normal basic waters that contain more than 1 mg/l of iron soon become turbid with the insoluble reddish ferric compounds produced by oxidation. Surface waters, therefore, seldom contain as much as 1 mg/l of dissolved iron, although some acid waters carry large quantities of iron in solution. Iron causes reddish-brown stains on porcelain or enameled ware and fixtures and on fabrics washed in the water. The highest desirable level of concentrations of iron in culinary and drinking-water is 0.1 mg/l (100 ug/l) with a maximum permissible level of 1.0 mg/l (1000 ug/l). (International Standards for Drinking-Water (ISD-W), 1971).

## Manganese (Mn)

Manganese is dissolved in appreciable quantities from rocks in some sections of the country. It resembles iron in its chemical behavior and in its occurrence in natural waters. However, manganese in rocks is less abundant than iron. As a result the concentration of manganese is much less than that of iron and is not regularly determined in many areas. It is especially objectionable in water used in laundry work and in textile processing. Concentrations as low as 0.2 mg/l (200 ug/l) may cause a dark-brown or black stain on fabrics and porcelain fixtures. Appreciable quantities of manganese are often found in waters containing objectionable quantities of iron.

## Calcium (Ca)

Calcium is dissolved from almost all rocks and soils, but the highest concentrations are usually found in waters that have been in contact with limestone, dolomite, and gypsum. Calcium and magnesium make water hard and are largely responsible for the formation of boiler scale. Most waters associated with granite or silicious sands contain less than 10 mg/l of calcium; waters in areas where rocks are composed of dolomite and limestone contain from 30 to 100 mg/l; and waters that have come in contact with deposits of gypsum may contain several hundred mg/l.

## Magnesium (Mg)

Magnesium is dissolved from many rocks, particularly from dolomitic rocks. Its effect in water is similar to that of calcium. The magnesium in soft waters may amount to only 1 or 2 mg/l, but water in areas that contain large quantities of dolomite or other magnesium-bearing rocks may contain from 20 to 100 mg/l or more of magnesium.

## Sodium and potassium (Na and K)

Sodium and potassium are dissolved from practically all rocks. Sodium is the predominant cation in some of the more highly mineralized waters found in the western United States. Natural waters that contain only 3 or 4 mg/l of the two together are likely to carry almost as much potassium as sodium. As the total quantity of these

constituents increases, the proportion of sodium becomes much greater. Moderate quantities of sodium and potassium have little effect on the usefulness of the water for most purposes, but waters that carry more than 50 to 100 mg/l of the two may require careful operation of steam boilers to prevent foaming. More highly mineralized waters that contain a large proportion of sodium salts may be unsatisfactory for irrigation.

#### Bicarbonate, carbonate and hydroxide ( $\text{HCO}_3$ , $\text{CO}_3$ , OH)

Bicarbonate, carbonate, or hydroxide is sometimes reported as alkalinity. The alkalinity of a water is produced by anions or molecular species of weak acids which are not fully dissociated above a pH of 4.5. Since the major causes of alkalinity in most natural waters are carbonate and bicarbonate ions dissolved from carbonate rocks, the results are usually reported in terms of these constituents. Although alkalinity may suggest the presence of definite amounts of carbonate, bicarbonate or hydroxide, there are other ions that contribute to alkalinity such as silicates, phosphates, borates, possibly fluoride, and certain organic anions which may occur in colored waters. The significance of alkalinity to the domestic, agricultural, and industrial user is usually dependent upon the nature of the cations (Ca, Mg, Na, K) associated with it. Alkalinity in moderate amounts does not adversely affect most users.

Hydroxide may occur in water that has been softened by the lime process. Its presence in streams usually can be taken as an indication of contamination and does not represent the natural chemical character of the water.

#### Sulfide (S)

Sulfide occurs in water as a result of bacterial and chemical processes. It usually is present as hydrogen sulfide. Variable amounts may be found in waters receiving sewage and (or) industrial wastes, such as from tanneries, papermills, chemical plants, and gas manufacturing work (California State Water Quality Control Board, 1963).

Waters containing sulfides, especially hydrogen sulfide, may be considered undesirable because of their odor. The toxicity to aquatic organisms differs significantly with the species and the nature of associated ions.

#### Sulfate ( $\text{SO}_4$ )

Sulfate is dissolved from most sedimentary rocks. Large quantities may be derived from beds of gypsum, sodium sulfate deposits, and some types of shale. Organic material containing sulfur adds sulfate to the water as a phase of the sulfur cycle. In natural waters, concentrations range from a few mg/l to several thousand mg/l.

ISD-W (1971) recommends 200 mg/l as the highest desirable level of sulfate concentration in drinking and culinary water.

Sulfates are less toxic to crops than chlorides.

#### Chloride (Cl)

Chloride is dissolved from rock materials in all parts of the country. Surface waters in the humid regions are usually low in chloride, whereas streams in arid or semiarid regions may contain several hundred mg/l of chloride leached from soils and rocks, especially where the streams receive return drainage from irrigated lands or are affected by ground-water inflow carrying appreciable quantities of chloride. Large quantities of chloride in water that contains a high content of calcium and magnesium increases the water's corrosiveness. The presence of abnormal concentrations of chloride and nitrogenous material together in water supplies indicates possible pollution by human or animal wastes.

#### Fluoride (F)

Fluoride has been reported as being present in some rocks to about the same extent as chloride. However, the quantity of fluoride in natural surface waters is ordinarily very small compared to that of chloride. Investigations have proved that fluoride concentrations of about 0.6 to 1.7 mg/l reduced the incidence of dental caries and that concentrations greater than 1.7 mg/l also protect the teeth from cavities

but cause an undesirable black stain (Durfor and Becker, 1964, p. 20). Public Health Service, 1962, states, "When fluoride is naturally present in drinking water, the concentration should not average more than the appropriate upper control limit (0.6 to 1.7 mg/l). Presence of fluoride in average concentration greater than two times the optimum values shall constitute grounds for rejection of the supply." Concentration higher than the stated limits may cause mottled enamel in teeth, endemic cumulative fluorosis, and skeletal effects.

#### Bromide (Br)

Bromine is a very minor element in the earth's crust and is normally present in surface waters in only minute quantities. Measurable amounts may be found in some streams that receive industrial wastes, and some natural brines may contain rather high concentrations. It resembles chloride in that it tends to be concentrated in sea water.

#### Iodide (I)

Iodide is considerably less abundant both in rocks and water than bromine. Measurable amounts may be found in some streams that receive industrial wastes, and some natural brines may contain rather high concentrations. It occurs in sea water to the extent of less than 1 mg/l. Rankama and Sahama (1950) report iodide present in rainwater to the extent of 0.001 to 0.003 mg/l and in river water in about the same amount. Few waters will contain over 2.0 mg/l.

#### Nitrogen, organic (N)

Organic nitrogen includes all nitrogenous organic compounds, such as amino acid, polypeptides, and proteins. It is present naturally in all surface waters as the result of inflow of nitrogenous products from the watershed and the normal biological life of the stream.

Organic nitrogen is not pathologically significant but is sometimes an indication of pollution.

#### Nitrogen, ammonia ( $\text{NH}_4$ , as N)

Ammonia nitrogen includes nitrogen in the forms of  $\text{NH}_3$  and  $\text{NH}_4^{+1}$ . As a component of the nitrogen cycle, it is often present in water, but usually in only small amounts. More than 0.1 mg/l usually indicates organic pollution (Rudolph, 1931).

There is no evidence that ammonia nitrogen in water is physiologically significant to man or livestock. Fish, however, cannot tolerate large quantities.

#### Nitrite ( $\text{NO}_2$ )

Nitrite is unstable in the presence of oxygen and is, therefore, absent or present in only minute quantities in most natural waters under aerobic condition. The presence of nitrite in water is sometimes an indication of organic pollution.

Recommended tolerances of nitrite in domestic water supplies differ widely. A generally accepted limit is 2 mg/l, but as little as 0.1 mg/l has been proposed (California State Water Quality Control Board, 1963).

#### Nitrate ( $\text{NO}_3$ )

Nitrate in water is considered a final oxidation product of nitrogenous material and may indicate contamination by sewage or other organic matter, such as agricultural runoff, or industrial waste. The quantities of nitrate present in surface waters are generally less than 5 mg/l (as  $\text{NO}_3$ ) and have no effect on the value of the water for ordinary uses.

It has been reported that as much as 2 mg/l of nitrate in boiler water tends to decrease intercrystalline cracking of boiler steel. Studies made by Faucett and Miller (1946), Waring (1949) and by the National Research Council (Maxcy, 1950) concluded that drinking water containing nitrates in excess of 44 mg/l (as  $\text{NO}_3$ ) should be regarded as unsafe for infant feeding. ISD-W (1971) sets 45 mg/l as the upper limit.

### Phosphorus (P)

Phosphorus is an essential element in the growth of plants and animals. It occurs in water as organically bound phosphorus or as phosphate ( $\text{PO}_4$ ). Some sources that contribute nitrate, such as organic wastes are also important sources of phosphorus. The addition of phosphates in water treatment constitutes a possible source although the dosage is usually small. In some areas phosphate fertilizers may yield some phosphorus to water. Another important source is the use of phosphates in detergents. Domestic and industrial sewage effluents often contain considerable amounts of phosphorus. Concentrations of phosphorus found in water are not reported to be toxic to man, animal, or fish. However, the element can stimulate the growth of algae, which may cause taste and odor problems in public water treatment and esthetic problems in recreation areas.

### Boron (B)

Boron in small quantities has been found essential for plant growth, but irrigation water containing more than 1 mg/l boron is detrimental to citrus and other boron-sensitive crops. Boron is reported in Survey analyses of surface waters in arid and semiarid regions of the Southwest and West where irrigation is practiced or contemplated, but few of the surface waters analyzed have harmful concentrations of boron.

### Dissolved solids

The reported quantity of dissolved solids--the residue on evaporation--consists mainly of the dissolved mineral constituents in the water. It may also contain some organic matter and water of crystallization. Waters with less than 500 mg/l of dissolved solids are usually satisfactory for domestic and some industrial uses. Water containing several thousand mg/l of dissolved solids are sometimes successfully used for irrigation where practices permit the removal of soluble salts through the application of large volumes of water on well-drained lands, but generally water containing more than about 2,000 mg/l is considered to be unsuitable for long-term irrigation under average conditions.

### Arsenic (As)

Arsenic compounds are present naturally in some waters, but the occurrence of quantities detrimental to health is rare. Weed killers, insecticides and many industrial effluents contain arsenic and are potential sources of water pollution. The upper limits of arsenic concentration in drinking-water should not exceed 0.05 mg/l (50 ug/l) and it would seem wiser to keep the level as low as possible (ISD-W, 1971). Concentrations of 2-4 mg of arsenic per liter are reported not to interfere with the self-purification of streams (Rudolfs and others, 1944) but concentrations in excess of 15 mg/l may be harmful to some fish.

### Barium (Ba)

Barium may replace potassium in some of the igneous rock minerals, especially feldspar, and barium sulfate (barite) is a common barium mineral of secondary origin. Only traces of barium are present in surface water and sea water. Because natural water contains sulfate, barium will dissolve only in trace amounts. Barium sometimes occurs in brines from oil-well wastes.

Barium concentrations in excess of 1.0 mg/l is not suitable for drinking and culinary use because of the serious toxic effects of barium on heart, blood vessels, and nerves.

### Cadmium (Cd)

This element is found in nature largely in the form of the sulfide, and as an impurity in zinc-lead ores. The carbonate and hydroxide are not very soluble in water and will precipitate at high pH values; the chloride, nitrate, and sulfate are soluble and remain in solution under most pH conditions.

The extensive use of the element and its salts in metallurgy, electroplating, ceramics, and photography make it a frequent component of industrial wastes.

The results of animal studies suggest that very small amounts of cadmium can produce nephrotoxic and cardiovascular effects. The reproductive organs of animals are specifically affected after parenteral administration of very small amounts of cadmium salts. The level of cadmium concentration proposed for water use is 0.01 mg/l (10 ug/l) or the lowest concentration that can be conveniently measured (ISD-W, 1971).

#### Chromium (Cr)

Few if any waters contain chromium from natural sources. Natural waters can probably contain only traces of chromium as a cation unless the pH is very low. When chromium is present in water, it is usually the result of pollution by industrial wastes. Concentrations of more than 0.05 mg/l of chromium in the hexavalent form constitute grounds for rejection of a water for domestic use on the basis of the standards of the U.S. Public Health Service (1962).

#### Cobalt (Co)

Cobalt occurs in nature in the minerals smaltite,  $(\text{Co}, \text{Ni})\text{As}_2$ , and cobaltite,  $\text{CoAsS}$ . Alluvial deposits and soils derived from shales often contain cobalt in the form of phosphate or sulfate, but other soil types may be markedly deficient in cobalt in any form (Bear, 1955). Ruminant animals may be adversely affected by grazing on land deficient in cobalt.

For domestic water supplies, no maximum safe concentration has been established.

#### Copper (Cu)

Copper is a fairly common trace constituent of natural water. Small amounts may be introduced into water by solution of copper and brass water pipes and other copper-bearing equipment in contact with the water, or from copper salts added to control algae in open reservoirs. Copper salts such as the sulfate and chloride are highly soluble in waters with a low pH but in water of normal alkalinity the salts hydrolyze and the copper may be precipitated. In the normal pH range of natural water containing carbon dioxide, the copper might be precipitated as carbonate. The oxidized portions of sulfide-copper ore bodies contain other copper compounds. The presence of copper in mine water is common.

Copper imparts a disagreeable metallic taste to water. As little as 1.5 mg/l can usually be detected, and 5 mg/l can render the water unpalatable. Copper is not considered to be a cumulative systemic poison like lead and mercury; most copper ingested is excreted by the body and very little is retained. The pathological effects of copper are controversial, but it is generally believed very unlikely that humans could unknowingly ingest toxic quantities from palatable drinking water. The U.S. Public Health Service (1962) recommends that copper should not exceed 1.0 mg/l (10 ug/l) in drinking and culinary water. ISD-W, 1971 gives 0.05 mg/l (50 ug/l) as the highest desirable level.

#### Lead (Pb)

Lead seldom occurs in most natural waters, but industrial mine and smelter effluents may contain relatively large amounts of lead which contaminates the streams. Also, atmospheric contamination which is produced from several types of engine exhausts has considerably increased the availability of this element for solution in rainfall, resulting in contamination of lead in streams (Hem, 1970).

Lead in the form of sulfate is reported to be soluble in water to the extent of 31 mg/l (Seidell, 1940) at 25°C. In natural water this concentration would not be approached, however, since a pH of less than 4.5 would probably be required to prevent formation of lead hydroxide and carbonate. It is reported (Pleissner, 1907) that at 18°C water free of carbon dioxide will dissolve the equivalent of 1.4 mg/l of lead and the solubility is increased nearly four fold by the presence of 2.8 mg/l of carbon dioxide in the solution. Presence of other ions may increase the solubility of lead. Reports on human tolerance of lead vary widely. U.S. Public Health Service (1962) states that lead shall not exceed 0.05 mg/l (50 ug/l) in drinking and culinary water on carriers subject to Federal quarantine regulations. ISD-W, 1971 gives 0.10 mg/l (100 ug/l) as the upper limit.

### Lithium (Li)

Lithium is present in some minerals but is not abundant in nature. From available information, most fresh waters rarely contain lithium of concentrations exceeding 10 mg/l, but larger quantities may be present in brines and thermal waters. Lithium is used in metallurgy, medicinal water, and some types of glass and storage batteries. Waste from such industries may contain lithium.

### Mercury (Hg)

Mercury is the only common metal which is liquid at ordinary temperatures. It occurs free in nature but its chief source is cinnabar (HgS). Mercury compounds are virulent culminative poisons which are readily absorbed through the respiratory and gastrointestinal tracts or through unbroken skin (Weast and Selby, 1967).

The main source of high concentrations of dissolved mercury in water, in the form of highly toxic methyl mercury,  $\text{Hg}(\text{CH}_3)_2$ , comes from waste discharges from industrial users of mercury and from mercurial pesticides.

Fish from streams and lakes subject to mercury contamination have been found to contain amounts of mercury above the safe limits for food consumption. The U.S. Public Health Service has proposed that the upper limits of dissolved mercury in water for domestic use should not exceed 5 micrograms per liter (0.005 mg/l). ISD-W, 1971 recommends 0.01 mg/l (1 ug/l) as the upper limits of concentration.

### Nickel (Ni)

Elemental nickel seldom occurs in nature, but its compounds are found in many ores and minerals. Many nickel salts are quite soluble and may contribute to water pollution, especially when discharged from metal-plating industries.

No set limit of nickel concentration has been established for public water supply.

### Strontium (Sr)

Strontium is a typical alkaline-earth element and is similar chemically to calcium. Strontium may be present in natural water in amounts up to a few mg/l much more frequently than the available data indicate. In most surface water the amount of strontium is small in proportion to calcium. However, in sea water the ratio of strontium to calcium is 1:30.

### Zinc (Zn)

Zinc is abundant in rocks and ores but is only a minor constituent in natural water because the free metal and its oxides are only sparingly soluble. In most alkaline surface waters it is present only in trace quantities, but more may be present in acid water. Chlorides and sulfates of zinc are highly soluble. Zinc is used in many commercial products, and industrial wastes may contain large amounts.

Zinc in water does not cause serious effects on health, but produces undesirable esthetic effects. ISD-W, 1971 gives 5 mg/l (5000 ug/l) of zinc content as the highest desirable level for drinking water and 15 mg/l as the maximum permissible level.

## PROPERTIES AND CHARACTERISTICS OF WATER

### Dissolved solids

Theoretically, dissolved solids are anhydrous residues of the dissolved substances in water.

All solutes affect the chemical and physical properties of the water and result in an osmotic pressure. Water with several thousand mg/l of dissolved solids is generally not palatable, although those accustomed to highly mineralized water may complain that less concentrated water tastes flat. The U.S. Public Health Service (1962) recommends that the maximum concentration of dissolved solids not exceed 500 mg/l in drinking and culinary water on carriers subject to Federal quarantine regulations, but permits 1,000 mg/l if no better water is available. ISD-W (1971) recommends 500 mg/l as the highest desirable level and 1500 mg/l as the maximum permissible level. Reported livestock

tolerances range from 3,000 mg/l (Colorado Agricultural Experiment Station, 1943) to 15,000 mg/l (Heller, 1933).

Industrial tolerances for dissolved solids differ widely, but few industrial processes will permit more than 1,000 mg/l. The Geological Survey classifies the degree of salinity of these more mineralized bodies of water as follows (Swenson and Baldwin, 1965):

| Dissolved solids (mg/l)    | Degree of salinity |
|----------------------------|--------------------|
| Less than 1,000 . . . . .  | Nonsaline.         |
| 1,000 to 3,000 . . . . .   | Slightly saline.   |
| 3,000 to 10,000. . . . .   | Moderately saline. |
| 10,000 to 35,000 . . . . . | Very saline.       |

### Hardness

Hardness is the characteristic of water that receives the most attention in industrial and domestic use. It is commonly recognized by the increased quantity of soap required to produce lather. The use of hard water is also objectionable because it contributes to the formation of scale in boilers, water heaters, radiators, and pipes, with the resultant decrease in rate of heat transfer, possibility of boiler failure, and loss of flow.

Hardness is caused almost entirely by compounds of calcium and magnesium. Other constituents--such as iron, manganese, aluminum, barium, strontium, and free acid--also cause hardness, although they usually are not present in quantities large enough to have any appreciable effect.

Generally, bicarbonate and carbonate determine the proportions of "carbonate" hardness of water. Carbonate hardness is the amount of hardness chemically equivalent to the amount of bicarbonate and carbonate in solution. Carbonate hardness is approximately equal to the amount of hardness that is removed from water by boiling.

Noncarbonate hardness is the difference between the hardness calculated from the total amount of calcium and magnesium in solution and the carbonate hardness. The scale formed at high temperatures by the evaporation of water containing non-carbonate hardness commonly is tough, heat resistant, and difficult to remove.

Although many people talk about soft water and hard water, there has been no firm line of demarcation. Water that seems hard to an easterner may seem soft to a westerner. In this report hardness of water is classified as follows:

| Hardness range<br>(calcium carbonate in mg/l) | Hardness description |
|---|----------------------|
| 0-60 . . . . .                                | Soft                 |
| 61-120 . . . . .                              | Moderately hard      |
| 121-180 . . . . .                             | Hard                 |
| More than 180 . . . . .                       | Very hard            |

Durfor and Becker, 1964, p. 23-27.

### Acidity ( $H^{+1}$ )

The use of the terms acidity and alkalinity is widespread in the literature of water analysis and is a cause of confusion to those who are more accustomed to seeing a pH of 7.0 used as a neutral point. Acidity of a natural water represents the content of free carbon dioxide and other uncombined gases, organic acids and salts of strong acids and weak bases that hydrolyze to give hydrogen ions. Sulfates of iron and aluminum in mine and industrial wastes are common sources of acidity.

### Sodium adsorption ratio (SAR)

The term "sodium adsorption ratio (SAR)" was introduced by the U.S. Salinity Laboratory Staff (1954). It is a ratio expressing the relative activity of sodium ions

in exchange reaction with soil and is an index of the sodium or alkali hazard to the soil. Sodium adsorption ratio is expressed by the equation:

$$SAR = \frac{Na^{+}}{\sqrt{\frac{Ca^{++} + Mg^{++}}{2}}}$$

where the concentrations of the ions are expressed in milliequivalents per liter.

Waters are divided into four classes with respect to sodium or alkali hazard: low, medium, high, and very high, depending upon the SAR and the specific conductance. At a conductance of 100 micromhos per centimeter the dividing points are at SAR values of 10, 18, and 26, but at 5,000 micromhos the corresponding dividing points are SAR values of approximately 2.5, 6.5, and 11. Waters range in respect to sodium hazard from those which can be used for irrigation on almost all soils to those which are generally unsatisfactory for irrigation.

Specific conductance (micromhos per centimeter at 25°C)

Specific conductance is a convenient, rapid determination used to estimate the amount of dissolved solids in water. It is a measure of the ability of water to transmit a small electrical current (see p. 6). The more dissolved solids in water that can transmit electricity the greater the specific conductance of the water. Commonly, the amount of dissolved solids (in mg/l) is about 65 percent of the specific conductance (in micromhos). This relation is not constant from stream to stream or from well to well and it may even vary in the same source with changes in the composition of the water (Durfor and Becker, 1964 p. 27-29).

Specific conductance of most waters in the eastern United States is less than 1,000 micromhos, but in the arid western parts of the country, a specific conductance of more than 1,000 micromhos is common.

Hydrogen-ion concentration (pH)

Hydrogen-ion concentration is expressed in terms of pH units (see p. 6). The values of pH often are used as a measure of the solvent power of water or as an indicator of the chemical behavior certain solutions may have toward rock minerals.

The degree of acidity or alkalinity of water, as indicated by the hydrogen-ion concentration, expressed as pH, is related to the corrosive properties of water and is useful in determining the proper treatment for coagulation that may be necessary at water-treatment plants. A pH of 7.0 indicates that the water is neither acid nor alkaline. pH readings progressively lower than 7.0 denote increasing acidity and those progressively higher than 7.0 denote increasing alkalinity. The pH of most natural surface waters ranges between 6 and 8. Some alkaline surface waters have pH values greater than 8.0 and waters containing free mineral acid or organic matter usually have pH values less than 4.5.

The investigator who utilizes pH data in his interpretations of water analyses should be careful to place pH values in their proper perspective.

Temperature

Temperature is an important factor in properly determining the quality of water. This is very evident for such a direct use as an industrial coolant. Temperature is also important, but perhaps not so evident, for its indirect influence upon aquatic biota, concentrations of dissolved gases, and distribution of chemical solutes in lakes and reservoirs as a consequence of thermal stratification and variation.

Surface water temperatures tend to change seasonally and daily with air temperatures, except for the outflow of large springs. Superimposed upon the annual temperature cycle is a daily fluctuation of temperature which is greater in warm seasons than in cold and greater in sunny periods than with a cloud cover. Natural warming is due mainly to absorption of a solar radiation by the water and secondarily to transfer of heat from the air. Condensation of water vapor at the water surface is reported to furnish measurable quantities of heat. Heat loss takes place largely through radiation, with further

losses through evaporation and conduction to the air and to the streambed. Thus the temperature of a small stream generally reaches a maximum in mid- to late afternoon due to solar heating and reaches a minimum from early to mid-morning after nocturnal radiation.

### Color

In water analysis the term "color" refers to the appearance of water that is free from suspended solids. Many turbid waters that appear yellow, red, or brown when viewed in the stream show very little color after the suspended matter has been removed. The yellow-to-brown color of some waters is usually caused by organic matter extracted from leaves, roots, and other organic substances in the ground. In some areas objectionable color in water results from industrial wastes and sewage. Clear deep water may appear blue as the result of a scattering of sunlight by the water molecules. Water for domestic use and some industrial uses should be free from any perceptible color. A color less than 15 units generally passes unnoticed (U.S. Public Health Service, 1962). Some swamp waters have natural color in excess of 300 units.

The extent to which a water is colored by material in solution is commonly reported as a part of a water analysis because a significant color in water may indicate the presence of organic material that may have some bearing on the dissolved solids content. Color in water is expressed in terms of units between 0 and 500 or more based on the above standard (see p. 6).

### Turbidity

Turbidity is the optical property of a suspension with reference to the extent to which the penetration of light is inhibited by the presence of insoluble material. Turbidity is a function of both the concentration and particle size of the suspended material. It is reported in terms of mg/l of silica or Jackson turbidity units (JTU).

Turbid water is abrasive in pipes, pumps, and turbine blades. Although turbidity does not directly measure the safety of drinking water, it is related to the consumer's acceptance of the water. The highest desirable level of turbidity for drinking water is 5 JTU with a maximum permissible level of 25 JTU (ISD-W, 1971).

### Density at 20°C

Density is the mass of any substance per unit volume at a designated standard temperature. Density should not be confused with specific gravity, which is a mass-to-mass relation.

The density value has some use in industries that utilize brines and whose basic unit of concentration of dissolved material is density. Density is used primarily by the chemist in the computation of milligrams per liter for highly mineralized waters.

### Dissolved oxygen (DO)

Oxygen dissolved in water is derived from the air and from the oxygen given off in the process of photosynthesis by aquatic plants.

Dissolved oxygen in water has no adverse physiological effect and actually increases the palatability of the water. No minimum concentration of dissolved oxygen required to support fish life has been listed because the oxygen requirements of fish vary with the species and age, with temperature, and with concentration of other substances in the water.

Dissolved oxygen is responsible for many of the corrosion problems in industry.

### Chemical oxygen demand (COD)

Chemical oxygen demand is a measure of the chemically oxidizable material in the water, and furnishes an approximation of the amount of organic and reducing material present. The determined value may correlate with natural-water color or with carbonaceous organic pollution from sewage or industrial wastes.

### Biochemical oxygen demand (BOD)

Biochemical oxygen demand is a measure of the oxygen required to oxidize the organic material usable as a source of food by aerobic organisms.

### Biological and microbiological information

Biological and microbiological information is an important aspect in the evaluation of water quality. The kinds and amount of aquatic biota in a stream or lake can be useful "indicators" of environmental conditions and particularly of the degree of pollution of water with organic wastes (Doudoroff and Warren, 1957). Biological information includes qualitative and quantitative analyses of plankton, bottom organisms, and particulate inorganic and amorphous matter present. Microbiological information includes quantitative identification of certain bacteriological indicator organisms.

Chlorophyll (plant pigment).--The concentrations of photosynthetic pigments in natural waters vary with time and changing aquatic conditions. Concentrations of chlorophyll a, b, and c (spectrophotometric determination) are used to estimate the biomass and photosynthetic capacity of phytoplankton (blue-green algae). Ratios between the different forms of chlorophyll are thought to indicate the taxonomic composition or the physiological state of the algae community (Slack, 1970).

Plankton.--Plankton is the floating (or weakly swimming) animal or plant life in a body of water consisting, chiefly of minute plants (as diatoms and blue-green algae) and of minute animals (as protozoan, entomostracans and various larvae). Algae are known to cause tastes and odor in water supply.

Plankton population in water is obtained by count level (the number of organisms per milliliter).

Coliform bacteria.--Coliform organisms have long been used as indicators of sewage pollution, although the group includes bacteria from diverse natural sources and habitats. For example, members of the coliform group are indigenous to soil and vegetation as well as feces. Standards for drinking-water quality provide definite minimums as to number of samples examined and the maximum number of coliform organisms allowable per 100 milliliters (ml) of finished water (Slack, 1970). The coliform population of water is determined either by the most probable number (MPN), or by the incubation membrane filter method, a direct count of coliform colonies per plate.

Fecal coliform bacteria.--Fecal coliform is that portion of the coliform group that is present in the intestinal tract of warm-blooded animals and is capable of producing gas from lactose in suitable culture medium at 44.5°C. Organisms from other sources generally cannot produce gas in this manner. (American Public Health Assoc. and others, 1965). Thus, in general, the presence of fecal coliform organisms indicates recent pollution (Slack, 1970).

### Organics

Phenols.--Phenolic material in water resources is invariably the result of pollution. Phenols are widely used as disinfectants and in the synthesis of many organic compounds. Waste products from oil refineries, coke areas, and chemical plants may contain high concentrations. Fortunately, phenols decompose in the presence of oxygen and microorganisms, and their persistence downstream from point of entry is relatively short lived. The rate of decomposition is dependent on the environment.

Very low concentrations impart such a disagreeable taste to water that it is highly improbable that harmful amounts could be consumed unknowingly. Reported thresholds of detection of taste and odor range from 0.001 to 0.01 mg/l.

Cyanide (CN).--Cyanides are not found free in nature, but may become contaminants of water supplies as means of effluents from gasworks, coke ovens, steel mills, electroplating processes, and chemical industries. In natural streams and organic soils, simple cyanides are decomposed by bacterial action, whereas the metal-cyanide complexes are often quite stable and more resistant to degradation. The U.S. Public Health Service (1962) set a recommended limit of 0.01 mg cyanide per liter and a

mandatory limit of 0.2 mg/l for waters subject to interstate regulations. ISD-W (1971) sets the upper limit for drinking water as 0.05 mg/l.

Detergents (methylene blue active substance, MBAS).--Anionic surfactants in detergents resist chemical oxidation and biological breakdown. Soap is an example of this class and the synthetic members are sodium salts of organic sulfonates or sulfates. (Rose, 1966). Their persistence in water over long periods of time contributes to pollution of both ground water and surface water. Some of the effects produced from detergent pollution are unpleasant taste, odor, and foaming (Wayman, and others, 1962). Although the physiological implications of MBAS to human beings is unknown, prolonged ingestion of this material by rats is believed to be nontoxic (Paynter, 1960). The U.S. Public Health Service (1962) recommends that MBAS should not exceed 0.5 mg/l in drinking and culinary waters. ISD-W (1971) sets 0.2 mg/l as the highest desirable level and 1.0 mg/l as the maximum permissible level.

Total Organic Carbon (TOC).--Total organic carbon is a measure of the organically related carbonaceous content of water. It includes all natural and manmade organic compounds which are combustible at a temperature of 950°C.

#### Sediment

Fluvial sediment generally is regarded as that material which is transported by, suspended in, or deposited by water. Suspended sediment is that part which remains in suspension in water owing to the upward components of turbulent currents or by colloidal suspension. Much fluvial sediment results from the natural process of erosion, which in turn is part of the geologic cycle of rock transformation. This natural process may be accelerated by agricultural practices. Sediment also is contributed by a number of industrial and construction activities. In certain sections, waste materials from mining, logging, oil-field, and other industrial operations introduce large quantities of suspended material.

The quantity of sediment, transported or available for transportation, is affected by climatic conditions, form or nature of precipitation, character of the solid mantle, plant cover, topography, and land use. The mode and rate of sediment erosion, transport, and deposition is determined largely by the size distribution of the particles or more precisely by the fall velocities of the particles in water. Sediment particles in the sand size range (larger than 0.062 mm) do not appear to be affected by flocculation or dispersion resulting from the mineral constituents in solution. In contrast, the sedimentation diameter of clay and silt particles in suspension may vary considerably from point to point in a stream or reservoir, depending on the mineral matter in solution and in suspension and the degree of turbulence present. The size of sediment particles in transport at any point depends on the type of erodible and soluble material in the drainage area, the degree of flocculation present, time in transport, and characteristics of the transporting flow. The flow characteristics include velocity of water, turbulence, and the depth, width, and roughness of the channel. As a result of these variable characteristics, the size of particles transported, as well as the total sediment load, is in constant adjustment with the characteristics and physical features of the stream and drainage area.

## STREAMFLOW

Most of the records of stream discharge, used in conjunction with the chemical analyses and in the computation of sediment loads in this volume, are published in the Geological Survey water-supply paper series, "Surface Water Supply of the United States, 1966-70." The discharge reported for a composite sample is usually the average of daily mean discharges for the composite period. The discharges reported in the tables of single analyses are either daily mean discharges or discharges obtained at the time samples were collected and computed from a stage-discharge relation or from a discharge measurement.

## PUBLICATIONS

Reports giving records of chemical quality and temperatures of surface waters and suspended-sediment loads of streams in the area covered by this volume for the water years 1941-69, are listed below:

Numbers of water-supply papers containing records for Parts 12-16, 1941-69

| Year | WSP  | Year | WSP  | Year | WSP  | Year | WSP  |
|------|------|------|------|------|------|------|------|
| 1941 | 942  | 1949 | 1163 | 1957 | 1523 | 1965 | 1966 |
| 1942 | 950  | 1950 | 1189 | 1958 | 1574 | 1966 | 1996 |
| 1943 | 970  | 1951 | 1200 | 1959 | 1645 | 1967 | 2016 |
| 1944 | 1022 | 1952 | 1253 | 1960 | 1745 | 1968 | 2100 |
| 1945 | 1030 | 1953 | 1293 | 1961 | 1885 | 1969 | 2150 |
| 1946 | 1050 | 1954 | 1353 | 1962 | 1945 |      |      |
| 1947 | 1102 | 1955 | 1403 | 1963 | 1951 |      |      |
| 1948 | 1133 | 1956 | 1453 | 1964 | 1959 |      |      |

Geological Survey reports containing chemical quality, temperature, and sediment data obtained before 1941 are listed below. Publications dealing largely with the quality of ground-water supplies and only incidentally covering the chemical composition of surface waters are not included. Publications that are out of print are preceded by an asterisk.

## PROFESSIONAL PAPER

- \*135. Composition of river and lake waters of the United States, 1924.

## BULLETINS

- \*479. The geochemical interpretation of water analyses, 1911.  
770. The data of geochemistry, 1924.

## WATER-SUPPLY PAPERS

- \*108. Quality of water in the Susquehanna River drainage basin, with an introductory chapter on physiographic features, 1904.  
\*161. Quality of water in the upper Ohio River basin and at Erie, Pa., 1906.  
\*193. The quality of surface waters in Minnesota, 1907.  
\*236. The quality of surface waters in the United States, Part 1, Analyses of waters east of the one hundredth meridian, 1909.  
\*237. The quality of the surface waters of California, 1910.  
\*239. The quality of surface waters of Illinois, 1910.  
\*273. Quality of the water supplies of Kansas, with a preliminary report on stream pollution by mine waters in southeastern Kansas, 1911.  
\*274. Some stream waters of the western United States, with chapters on sediment carried by the Rio Grande and the industrial application of water analyses, 1911.  
\*339. Quality of the surface waters of Washington, 1914.  
\*363. Quality of the surface waters of Oregon, 1914.  
\*418. Mineral springs of Alaska, with a chapter on the chemical character of some surface waters of Alaska, 1917.  
\*596-B. Quality of water of Colorado River in 1925-26, 1928.  
\*596-D. Quality of water of Pecos River in Texas, 1928.  
\*596-E. Quality of the surface waters of New Jersey, 1928.  
\*636-A. Quality of water of the Colorado River in 1926-28, 1930.  
\*636-B. Suspended matter in the Colorado River in 1925-28, 1930.  
\*638-D. Quality of water of the Colorado River in 1928-30, 1932.  
\*839. Quality of water of the Rio Grande basin above Fort Quitman, Tex., 1938.

- \*889-E. Chemical character of surface water of Georgia, 1944.
- \*998. Suspended sediment in the Colorado River, 1925-41, 1947.
- 1048. Discharge and sediment loads in the Boise River drainage basin, Idaho, 1939-40, 1948.
- 1110-C. Quality of water of Conchas Reservoir, New Mexico, 1939-49, 1952.

Many of the reports listed are available for consultation in the larger public and institutional libraries. Copies of Geological Survey publications still in print may be purchased at a nominal cost from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402, who will, upon request, furnish lists giving prices.

## COOPERATION

Many municipal, State, and Federal agencies assisted in collecting records for quality-of-water investigations. Many of the investigations were supported by funds appropriated directly to the U.S. Geological Survey. The State, local, and Federal agencies that cooperated in these quality-of-water investigations are as follows:

Alaska--Alaska Department of Health and Welfare, J. S. McDonald, commissioner; Alaska Department of Fish and Game, W. H. Noerenberg, commissioner; Greater Anchorage Area Borough, J. M. Asplund, chairman; Greater Juneau Borough, M. R. Charney, chairman; Kenai Peninsula Borough, G. A. Navarre, chairman; Kodiak Island Borough, W. T. White, chairman; city of Anchorage, G. M. Sullivan, mayor; city of Kenai, E. H. Morin, mayor, city of Petersburg, Edward Hagerman, mayor. Agencies assisting in the collection of records: Alaska Power Administration; Forest Service, U. S. Department of Agriculture; Alaska Air Command; Atomic Energy Commission; U.S. Air Force; Corps of Engineers, U.S. Army; Public Health Service, U.S. Department of Health, Education and Welfare; Fish and Wildlife Service, and Bureau of Indian Affairs, U.S. Department of the Interior.

Hawaii--City and county of Honolulu; Corps of Engineers, U.S. Army.

Idaho--Idaho Department of Reclamation, R. K. Higginson, State Reclamation engineer; Corps of Engineers, U.S. Army; Forest Service, U.S. Department of Agriculture; U.S. Department of State; Bureau of Commercial Fisheries, U.S. Department of the Interior.

Montana--Montana Fish and Game Commission, Division of Fisheries, A. N. Whitney, chief; Corps of Engineers, U.S. Army; Environmental Protection Agency.

Oregon--State Engineer of Oregon; Oregon Board of Higher Education; Oregon State Game Commission; counties of Douglas and Lane; cities of Coos Bay, North Bend, Portland, and Astoria; Portland General Electric Company; Corps of Engineers, U.S. Army; Bureau of Fish and Wildlife and Bureau of Reclamation, U.S. Department of the Interior; Forest Service, U.S. Department of Agriculture; counties of Clark and Cowlitz, Washington; Public Utilities Districts; Atomic Energy Commission.

Washington--Washington State Department of Water Resources, H. M. Ahlquist, director; Washington State Water Pollution Control Commission, J. P. Behlke, director; Washington State Department of Fisheries, T. C. Tollefson, director; city of Tacoma, Department of Public Utilities, C. A. Erdahl, director; Corps of Engineers, U.S. Army.

Wyoming--Wyoming Department of Agriculture, G. J. Hertzler, commissioner.

## DIVISION OF WORK

The quality-of-water work was performed by the Water Resources Division of the Geological Survey, J. S. Cragwall, Jr., chief hydrologist, and under the direction of the district chiefs listed in the preface.

Correspondence regarding the records in this report or any additional information should be directed to the district chief of the appropriate Geological Survey-Water Resources Division district office as indicated below.

| State      | District Office | Address  |
|------------|-----------------|--|
| Alaska     | Anchorage 99501 | 218 E Street<br>Skyline Bldg.  |
| Hawaii     | Honolulu 96814  | Room 330<br>First Insurance Bldg.<br>1100 Ward Avenue                              |
| Idaho      | Boise 83702     | Box 036, Federal Bldg.<br>and U.S. Court House<br>Room 365<br>550 West Fort Street |
| Montana    | Helena 59601    | 421 Federal Bldg.<br>316 N. Park Avenue<br>P. O. Box 1696                          |

## WATER-QUALITY STATIONS, IN DOWNSTREAM ORDER

## PART 12. PACIFIC SLOPE BASINS IN WASHINGTON AND UPPER COLUMBIA RIVER BASIN

## NASELLE RIVER BASIN

12010000 NASELLE RIVER NEAR NASELLE, WASH.

LOCATION.--Lat 46°22'25", long 123°44'30", in SW¼SW¼ sec.1, T.10 N., R.9 W., Pacific County, at bridge on county highway, 1,350 ft downstream from gaging station, 2.5 miles upstream from Salmon Creek, 3.5 miles east of Naselle, and at mile 17.4.

DRAINAGE AREA.--54.8 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

Water temperatures: August 1963 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 19.0°C June 17, Aug. 14, 15; minimum, 2.0°C Dec. 31, Jan. 27-31.

Period of record:

Water temperatures: Maximum, 23.0°C July 30, 1965, Aug. 15, 17, 1967; minimum, 2.0°C Dec. 31, 1968, Jan. 27-31, 1969.

REMARKS.--Temperature recorder at gaging station 1,350 ft upstream from sampling site.

## WILLAPA RIVER BASIN

27

12011500 WILLAPA RIVER AT LEBAM, WASH.

LOCATION (revised).--Lat 46°33'50", long 123°33'49", in SW $\frac{1}{4}$ SW $\frac{1}{4}$  sec.33, T.13 N., R.7 W., Pacific County, temperature recorder at gaging station on left bank, 0.1 mile downstream from bridge on State Highway 6, 0.5 mile west of Lebam, 1.0 mile upstream from Walker Creek, and at mile 33.9.

DRAINAGE AREA.--41.4 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1959 to July 1981.

Water temperatures: March 1952 to September 1989.

EXTREMES.--1968-89:

Water temperatures: Maximum, 20.0°C June 17, 18; minimum, 1.0°C Jan. 28, 29.

Period of record:

Water temperatures: Maximum, 22.5°C July 19, 20, 1956; minimum, freezing point Jan. 28-30, 1957, Jan. 21-23, 1962.

## WILLAPA RIVER BASIN

12013500 WILLAPA RIVER NEAR WILLAPA, WASH.

LOCATION.--Lat 46°39'00", long 123°38'50", in NE¼NW¼ sec.2, T.13 N., R.8 W., Pacific County, at bridge on county road, 200 ft downstream from gaging station, 350 ft downstream from Mill Creek, 2.5 miles southeast of Willapa, and at mile 18.2.

DRAINAGE AREA.--130 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

REMARKS.--Colliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## NORTH RIVER BASIN

29

12017000 NORTH RIVER NEAR RAYMOND, WASH.

LOCATION.—Lat 46°48'27", long 123°50'58", in SE¼SW¼ sec.6, T.15 N., R.9 W., Grays Harbor County (revised), temperature recorder at gaging station on left bank, 1.2 miles upstream from Salmon Creek, 10 miles northwest of Raymond, and at mile 6.9.

DRAINAGE AREA.—219 sq mi.

PERIOD OF RECORD.—Water temperatures: July 1963 to September 1969.

EXTREMES.—1968-69:

Water temperatures: Maximum, 21.0°C June 17, July 23-26; minimum, 1.0°C Jan. 28-31.

Period of record:

Water temperatures: Maximum, 23.0°C Aug. 15, 18, 19, 1967; minimum, 1.0°C Jan. 28-31, 1969.

REMARKS.—Recorder stopped Oct. 8-21; range in temperature, 9.0°C to 11.0°C.

## CHEHALIS RIVER BASIN

31

12025000 NEWAUKUM RIVER NEAR CHEHALIS, WASH.

LOCATION.--Lat 46°37'13" long 122°56'38", in SW¼SW¼ sec. 9, T. 13 N., R. 2 W., Lewis County, at gaging station at highway bridge, 3.0 miles southeast of Chehalis and at mile 4.1.

DRAINAGE AREA.--155 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1960 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).

Sediment records.--October 1961 to June 1965 (partial-records).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

| SEPTEMBER.....    | 446.9                   | 22.3                                      |

## CHEHALIS RIVER BASIN

12027500 CHEHALIS RIVER NEAR GRAND MOUND, WASH.

LOCATION. --Lat 46°46'34", long 123°02'04", in NE $\frac{1}{4}$ NE $\frac{1}{4}$  sec. 22, T.15 N., R.3 W., Thurston County, temperature recorder at gaging station on left bank at downstream side of highway bridge at Meadows, 1.5 miles southwest of Grand Mound, 7.0 miles downstream from Skookumchuck River, and at mile 59.9.

DRAINAGE AREA. --895 sq. mi.

PERIOD OF RECORD. --Water temperatures: March 1952 to September 1969.  
Sediment records: October 1961 to September 1964 (miscellaneous).

EXTREMES. --1968-69:

Water temperatures: Minimum, 1.0°C Jan. 24 to Feb. 2.

Period of record:

Water temperatures: Maximum (1952-67), 26.5°C July 22, 23, 1959; minimum, freezing point several days during January and February 1957.

REMARKS. --Recorder stopped Oct. 1-3; range in temperature, 12.0°C to 13.0°C. Thermograph not operating properly Apr. 25 to June 18, June 25 to July 1; range in temperature not determined.

## CHEHALIS RIVER BASIN

37

## 12031000 CHEHALIS RIVER AT PORTER, WASH.

LOCATION.--Lat 46°56'17", long 123°18'45", on north line of NE $\frac{1}{4}$  sec.28, T.17 N., R.5 W., Grays Harbor County, at gaging station at Chehalis River bridge at mouth of Porter Creek, 0.1 mile west of Porter and at mile 33.3.

DRAINAGE AREA.--1,294 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

Water temperatures: July 1959 to September 1960, October 1961 to September 1969.

Sediment records: October 1961 to September 1969.

EXTREMES.--1968-89:

Water temperatures: Maximum, 27.0°C June 17; minimum, freezing point Dec. 30, several days during January.

Sediment concentrations: Maximum daily, 141 mg/l Nov. 12; minimum daily, 2 mg/l Oct. 1-10, 27, July 30-Sept. 17.

Sediment loads: Maximum daily, 4,650 tons Nov. 12; minimum daily, 1.4 tons Sept. 9-15.

Period of record:

Water temperatures: Maximum, 27.0°C June 17, 1969; minimum, freezing point Dec. 15, 17, 1967, Dec. 30, 1968, several days during January 1969.

Sediment concentrations: Maximum daily, 452 mg/l Jan. 10, 1967; minimum daily, less than 1 mg/l on many days of most years.

Sediment loads: Maximum daily, 11,300 tons Jan. 10, 1967; minimum daily, less than 0.50 ton on many days most years.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## CHEHALIS RIVER BASIN

41

12035000 SATSOP RIVER NEAR SATSOP, WASH.

LOCATION.--Lat 47°00'03", long 123°29'37", in NE $\frac{1}{4}$ SE $\frac{1}{4}$  sec.36, T.18 N., R.7 W., Grays Harbor County, at gaging station at bridge on old U.S. Highway 410, 0.6 mile (revised) west of Satsop and 2.3 miles upstream from mouth.

DRAINAGE AREA.--299 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): July 1960 to September 1966 (miscellaneous), October 1966 to September 1969 (monthly).

Sediment records: October 1960 to September 1965 (partial records).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

CHEHALIS RIVER BASIN

43

12038100 WISHKAH RIVER NEAR WISHKAH, WASH.

LOCATION.--Lat 47°04'21", long 123°46'00", in NE¼SW¼ sec.2, T.18 N., R.9 W., Grays Harbor County, at Wishkah Road bridge, 500 ft upstream from East Fork, 2.3 miles downstream from Hamilton Canyon, 3.2 miles south of Wishkah, and at mile 12.3.

DRAINAGE AREA.--59.9 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1962 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## QUINULT RIVER BASIN

12039300 NORTH FORK QUINULT RIVER NEAR AMANDA PARK, WASH.  
(Hydrologic bench-mark station)

LOCATION (revised).--Lat 47°35'46", long 123°37'23", in SW¼ sec.6, T.24 N., R.7 W., Jefferson County, Olympic National Park, at gaging station on right bank, 15.5 miles northeast of Amanda Park and at mile 5.2.

DRAINAGE AREA.--74.1 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): October 1965 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

Water temperatures: March 1965 to September 1969.

Sediment records: April 1965 to September 1969 (partial-records).

EXTREMES.--1968-69:

Water temperatures: Maximum, 12.0°C July 23, 24, 27, Aug. 13-15, Sept. 1, 8-11; minimum, 2.0°C several days during December to February.

Period of record:

Water temperatures: Maximum, 14.0°C Aug. 7, 16-18, 1965; minimum, 1.0°C Jan. 31, 1968.

## DUNGENESS RIVER BASIN

12046000 DUNGENESS RIVER NEAR SEQUIM, WASH.

LOCATION (revised).--Lat 48°00'52", long 123°07'53", in NW¼NE¼ sec.13, T.29 N., R.4 W., Clallam County, temperature recorder at gaging station on right bank, 1.0 mile upstream from Canyon Creek, 4.8 miles southwest of Sequim, 5.4 miles upstream from bridge on U.S. Highway 101, and at mile 11.8.

DRAINAGE AREA.--156 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): July 1959 to June 1960, July 1960 to September 1969 (partial-records).

Water temperatures: July 1968 to December 1969 (discontinued).

EXTREMES.--October 1988 to December 1989:

Water temperatures: Maximum, 14.0°C Aug. 22; minimum, freezing point on many days December 1968 to February 1969.

Period of record:

Water temperatures: Maximum, 14.0°C Aug. 3, 1968, Aug. 22, 1969; minimum, freezing point on many days December 1968 to February 1969.

REMARKS.--Chemical sampling site 5.4 miles downstream. For chemical analyses, see "Analyses of samples collected at water-quality partial-record stations in Pacific slope basins in Washington and upper Columbia River basin."

## SKOKOMISH RIVER BASIN

12056500 NORTH FORK SKOKOMISH RIVER BELOW STAIRCASE RAPIDS, NEAR HOODSPORT, WASH.

LOCATION (revised).--Lat 47°30'52", long 123°19'43", in NW¼ sec.4, T.23 N., R.5 W., Mason County, Olympic National Park, temperature recorder at gaging station on left bank, 1.2 miles upstream from Lake Cushman, 2.8 miles upstream from Dry Creek, 11.3 miles northwest of Hoodport, and at mile 29.2.

DRAINAGE AREA.--57.2 sq mi.

PERIOD OF RECORD.--Water temperatures: April 1965 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum recorded, 11.0°C July 22 to Aug. 5; minimum, 1.0°C Dec. 31, Feb. 7-12.

Period of record:

Water temperatures: Maximum, 14.0°C Aug. 17, 18, 1965; minimum (1965-67, 1968-69), 1.0°C Dec. 27, 1965, Dec. 31, 1968, Feb. 7-12, 1969.

REMARKS.--Thermograph not operating properly Aug. 8 to Sept. 16; temperature range not determined.

## SKOKOMISH RIVER BASIN

12059800 SOUTH FORK SKOKOMISH RIVER NEAR HOODSPORT, WASH.

LOCATION.--Lat 47°28'45", long 123°24'54", in NW $\frac{1}{4}$  sec.35, T.23 N., R.6 W., Mason County, Olympic National Forest, temperature recorder at gaging station on left bank, 100 ft downstream from Pine Creek and 13.1 miles west of Hoodport.

DRAINAGE AREA.--26.0 sq mi.

PERIOD OF RECORD.--Water temperatures: October 1964 to September 1969 (discontinued).

EXTREMES.--1968-69:

Water temperatures: Maximum, 13.0°C on several days during July and August; minimum, 2.0°C on several days during December to March.

Period of record:

Water temperatures: Maximum, 14.0°C on several days during July 1965; minimum, 1.0°C Jan. 1, 2, 1965.

## SEKOMISH RIVER BASIN

51

## 12061500 SEKOMISH RIVER NEAR POTLATCH, WASH.

LOCATION (revised).--Lat 47°18'36", long 123°10'33", in SE¼NW¼ sec.15, T.21 N., R.4 W., Mason County, at gaging station at bridge on U.S. Highway 101, 3.7 miles downstream from confluence of North and South Forks, 4.7 miles southwest of Potlatch, and 5.3 miles upstream from mouth.

DRAINAGE AREA.--227 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): August 1960 to September 1961 (monthly), October 1961 to September 1969 (partial-records).

Water temperatures: May 1955 to September 1962, October 1963 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 13.0°C on several days during June to July; minimum, 2.0°C Dec. 31.

Period of record:

Water temperatures: Maximum, 20.5°C July 13, 1961; minimum (1955-62, 1964-69), 1.0°C Mar. 7, 1956.

REMARKS.--For chemical analyses, see "Analyses of samples collected at water-quality partial-record stations in Pacific slope basins in Washington and upper Columbia River basin."

## CHICO CREEK BASIN

53

12072000 CHICO CREEK NEAR BREMERTON, WASH.

LOCATION.--Lat 47°35'28", long 122°42'29", in NE $\frac{1}{4}$  sec.8, T.24 N., R.1 E., Kitsap County, at gaging station at bridge on State Highway 3, 0.5 mile downstream from Dickerson Creek and 3.7 miles northwest of Olympic College in Bremerton.

DRAINAGE AREA.--15.3 sq mi.

PERIOD OF RECORD.--Chemical analyses: November 1964 to September 1969.

## DESCHUTES RIVER BASIN

12079000 DESCHUTES RIVER NEAR RAINIER, WASH.

LOCATION.--Lat 46°51'08", long 122°40'03", in SE¼SW¼ sec.22, T.16 N., R.1 E., Thurston County, temperature recorder at gaging station on right bank, 75 ft upstream from county road crossing, 0.4 mile downstream from outlet of Reiche Lake, 2.7 miles southeast of Rainier, and at mile 25.9.

DRAINAGE AREA.--89.8 sq mi.

PERIOD OF RECORD.--Water temperatures: August 1968 to September 1969.

EXTREMES.--August 1968 to September 1969:

Water temperatures: Maximum, 19.0°C June 16-18, July 23, 1969; minimum, 1.0°C Dec. 29-31, 1969.

REMARKS.--Thermograph not operating properly Feb. 8, 9, 11, 12, range in stage not determined. Recorder stopped July 25-30; range in temperature 14.0°C to 18.0°C.

## DESCHUTES RIVER BASIN

12080000 DESCHUTES RIVER NEAR OLYMPIA, WASH.

LOCATION.--Lat 47°00'55", long 122°54'05", in SW $\frac{1}{4}$ SW $\frac{1}{4}$  sec.26, T.18 N., R.2 W., Thurston County, at bridge on old U.S. Highway 99, 0.3 mile upstream from mouth and 2.5 miles south of Olympia.

DRAINAGE AREA.--161 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): October 1962 to September 1966 (miscellaneous), October 1966 to September 1969 (monthly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available. Prior to October 1966, station published as "at Tumwater."

## NISQUALLY RIVER BASIN

12086500 NISQUALLY RIVER AT LA GRANDE, WASH.

LOCATION.--Lat 46°50'25", long 122°19'38", in NW¼ sec. 29, T.16 N., R.4 E., Pierce County, temperature recorder at gaging station on right bank, 0.4 mile downstream from city of Tacoma powerplant, 0.6 mile (revised) northwest of La Grande, 0.8 mile upstream from Mashel River, and at mile 40.4.

DRAINAGE AREA.--292 sq mi.

PERIOD OF RECORD.--Water temperatures: October 1965 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 13.0°C on many days during October and September; minimum, 3.0°C on many days during February and March.

Period of record:

Water temperatures: Maximum, 14.0°C Oct. 11-15, 1966; minimum, 3.0°C Feb. 15, 18, 21, 1966, on many days during February and March 1969.

PUYALLUP RIVER BASIN

61

12093500 PUYALLUP RIVER NEAR ORTING, WASH.

LOCATION.--Lat 47°02'20", long 122°12'15", in SW $\frac{1}{4}$ SW $\frac{1}{4}$  sec.17, T.18 N., R.5 E., Pierce County, at bridge on State Highway 162, 800 ft upstream from gaging station, 4.0 miles south of Orting, and at mile 26.5.

DRAINAGE AREA.--172 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## PUYALLUP RIVER BASIN

12100500 WHITE RIVER NEAR SUMNER, WASH.

LOCATION.--Lat 47°15'55", long 122°13'40", in SE¼NE¼ sec.36, T.21 N., R.4 E., Pierce County, at bridge on State Highway 167, 1.5 miles upstream from gaging station, 2.8 miles upstream from White River Powerplant outlet canal, 4 miles north of Sumner, and at mile 6.4.

DRAINAGE AREA.--470 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: October 1961 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

PUYALLUP RIVER BASIN

63

12101475 PUYALLUP RIVER AT MERIDIAN STREET BRIDGE, AT PUYALLUP, WASH.  
(Formerly published as 12101500 Puyallup River at Puyallup)

LOCATION.--Lat 47°12'10", long 122°17'33", on east line of sec.22, T.20 N., R.4 E., Pierce County, at Meridian Street bridge in Puyallup, 1.7 miles upstream from gaging station and at mile 8.3.

DRAINAGE AREA.--948 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1961, October 1965 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## DUWAMISH RIVER BASIN

65

12112600 BIG SOOS CREEK ABOVE HATCHERY, NEAR AUBURN, WASH.

LOCATION.--Lat 47°18'35", long 122°10'05", in SE $\frac{1}{4}$ NE $\frac{1}{4}$  sec.16, T.21 N., R.5 E., King County, at State Fish Hatchery diversion dam, 1.0 mile upstream from gaging station, 1.9 miles upstream from mouth, and 3.0 miles east of Auburn.

DRAINAGE AREA.--66.7 sq mi, excluding 3.67 sq mi in vicinity of Youngs Lake (at gaging station).

PERIOD OF RECORD.--Chemical analyses: October 1962 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. Minor inflow between sampling point and gaging station.

CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## DUWAMISH RIVER BASIN

12113000 GREEN RIVER NEAR AUBURN, WASH.

LOCATION.--Lat 47°18'05", long 122°10'23", in SW¼SE¼ sec.18, T.21 N., R.5 E., King County, at bridge on State Highway 18, 0.1 mile upstream from Big Soos Creek, 1.8 miles east of Auburn, 2.1 miles upstream from gaging station, and at mile 33.9.

DRAINAGE AREA.--399 sq mi, excluding 3.67 sq mi in the vicinity of Youngs Lake (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

Water temperatures: March 1952 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 20.0°C July 23, 24; minimum, 3.0°C Dec. 28 to Jan. 6.

Period of record:

Water temperatures: Maximum (1952-56, 1957-69), 24.0°C July 28, 1958; minimum (1952-56, 1957-62, 1963-65, 1968-69), 0.5°C Feb. 16, 17, 1956, Dec. 18-21, 1964.

REMARKS.--Coliform, dissolved oxygen data furnished by Washington State Water Pollution Control Commission. Temperature recorder at gaging station 2.1 miles downstream from sampling site. Minor inflow between sampling point and gaging station except during periods of heavy local runoff.

## DUWAMISH RIVER BASIN

69

12113350 GREEN RIVER AT TUKWILA, WASH.

LOCATION.--Lat 47°27'55", long 122°14'50", in NW¼SW¼ sec.24, T.23 N., R.4 E., King County, at gaging station at highway bridge, 0.6 mile southeast of Tukwila, 1.4 miles upstream from Black River, and at mile 12.4.

DRAINAGE AREA.--440 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1967 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## LAKE WASHINGTON BASIN

71

## 12119000 CEDAR RIVER AT RENTON, WASH.

LOCATION.—Lat 47°28'58", long 122°12'08", in SW¼NW¼ sec.17, T.23 N., R.5 E., King County, at gaging station 125 ft downstream from bridge on Mill Avenue at Renton and at mile 1.6.

DRAINAGE AREA.—186 sq mi (includes 3.67 sq mi in vicinity of Youngs Lake in Big Soos Creek basin).

PERIOD OF RECORD.—Chemical analyses (revised): July 1959 to September 1961, November 1966 to September 1967, October 1968 to September 1969 (monthly), November 1963 to September 1966 (miscellaneous).  
Water temperatures: August 1965 to February 1967.

REMARKS.—Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## LAKE WASHINGTON BASIN

12121600 ISSAQUAH CREEK NEAR MOUTH, NEAR ISSAQUAH, WASH.

LOCATION (revised).--Lat 47°33'09", long 122°02'48", in SE¼NW¼ sec.21, T.24 N., R.6 E., King County, at gaging station at bridge on SE 56th Street, 0.7 mile downstream from North Fork, 1.2 mile upstream from mouth, and 1.6 miles northwest of Issaquah.

DRAINAGE AREA.--54.7 sq mi.

PERIOD OF RECORD.--Chemical analyses: November 1964 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commissiop.

## LAKE WASHINGTON BASIN

73

## 12126500 SAMMAMISH RIVER AT BOTHELL, WASH.

LOCATION.--Lat 47°45'32", long 122°12'02", in NW $\frac{1}{4}$ NW $\frac{1}{4}$  sec. 8, T.26 N., R.5 E., King County, at 102nd Street bridge at Bothell, 1.0 mile downstream from North Creek and at mile 3.5.

DRAINAGE AREA.--212 sq mi.

PERIOD OF RECORD.--Chemical analyses (revised): July 1959 to September 1962, October 1967 to September 1969 (monthly), October 1961 to September 1967 (miscellaneous).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

## SNOHOMISH RIVER BASIN

12134500 SKYKOMISH RIVER NEAR GOLD BAR, WASH.

LOCATION.--Lat 47°50'15", long 121°39'25", in SW<sup>1</sup>/<sub>4</sub>SE<sup>1</sup>/<sub>4</sub> sec.9, T.27 N., R.9 E., Snohomish County, at bridge on U.S. Highway 2, 0.7 mile upstream from gaging station, 1.8 miles southeast of Gold Bar, and at mile 43.7.

DRAINAGE AREA.--535 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## SNOHOMISH RIVER BASIN

75

## 12135000 WALLACE RIVER AT GOLD BAR, WASH.

LOCATION (revised).--Lat 47°51'50", long 121°41'47", in NW¼ sec.6, T.27 N., R.9 E., Snohomish County, temperature recorder at gaging station on right bank, 30 ft downstream from highway bridge, 0.5 mile north of Gold Bar, 1.3 miles upstream from Olney Creek, and at mile 5.8.

DRAINAGE AREA.--19.0 sq mi.

PERIOD OF RECORD.--Water temperatures: July 1955 to September 1989.

EXTREMES.--1968-69:

Water temperatures: Maximum, 16.0°C on several days during June to August.

Period of record:

Water temperatures: Maximum (1958-69), 21.0°C July 29, Aug. 8, 9, 1960, July 13, 1961, Aug. 18, 1967; minimum (1955-57, 1958-68), freezing point on several days during February 1956, January 1957, and Dec. 16-18, 1964.

REMARKS.--Thermograph not operating properly Oct. 1 to Feb. 17; temperature range not determined.

## SNOHOMISH RIVER BASIN

12138200 SULTAN RIVER AT SULTAN, WASH.

LOCATION.--Lat 47°51'40", long 121°49'10", in NE 1/4 sec. 6, T. 27 N., R. 8 E., Snohomish County, at bridge on U.S. Highway 2 at Sultan, 0.1 mile upstream from mouth.

DRAINAGE AREA.--106 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1963 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

SNOKOMISH RIVER BASIN

77

12141100 SKYKOMISH RIVER AT MONROE, WASH.

LOCATION.—Lat 47°50'48", long 121°58'10", in NE¼NE¼ sec.12, T.27 N., R.6 E., Snohomish County, at crossing on State Highway 203 at Monroe, 0.1 mile downstream from Woods Creek and at mile 25.0.

DRAINAGE AREA.—834 sq mi.

PERIOD OF RECORD.—Water temperatures: October 1966 to June 1969 (discontinued).  
Sediment records: October 1966 to June 1969 (discontinued).

EXTREMES.—October 1968-June 1969:

Water temperatures: Maximum, 13.0°C Oct. 1; minimum, 1.0°C Jan. 27-31.

Sediment concentrations: Maximum daily, 586 mg/l Jan. 5; minimum daily, 2 mg/l Apr. 27, 28.

Sediment loads: Maximum daily, 98,100 tons Jan. 5; minimum daily, 16 tons Feb. 28, Mar. 1-3, 13, 14.

Period of record:

Water temperatures: Maximum, 21.0°C Aug. 15, 16, 1967, July 31, 1968; minimum, 1.0°C Dec. 20, 21, 1967, Jan. 27-31, 1969.

Sediment concentrations: Maximum daily, 586 mg/l Jan. 5, 1969; minimum daily, 1 mg/l Aug. 1-31, Oct. 5, 9, 10, 1967.

Sediment loads: Maximum daily, 98,100 tons Jan. 5, 1969; minimum daily, 2 tons Aug. 29, 1967.

REMARKS.—Water discharge estimated on basis of daily stage readings and water discharge from nearby stations.  
Streamflow above 12,000 cfs gaged.

## SNOHOMISH RIVER BASIN

81

12149000 SNOQUALMIE RIVER NEAR CARNATION, WASH.

LOCATION.--Lat 47°39'58", long 121°55'27", in NW¼SW¼ sec.9, T.25 N., R.7 E., King County, at gaging station at highway bridge, 1.3 miles northwest of Carnation, 1.9 miles downstream from Tolt River, and at mile 23.0.

DRAINAGE AREA.--603 sq mi.

PERIOD OF RECORD.--Water temperatures: October 1966 to June 1969 (discontinued).

Sediment records: October 1966 to June 1969 (discontinued).

EXTREMES.--October 1968 to June 1969:

Water temperatures: Maximum, 12.0°C Oct. 1-3, May 6-10, 12-26, June 25-26; minimum, 1.0°C Dec. 31, Jan. 1.

Sediment concentrations: Maximum daily, 803 mg/l Jan. 5; minimum daily, 1 mg/l Mar. 9-10, 1969.

Sediment loads: Maximum daily, 72,600 tons Jan. 5; minimum daily, 5.5 tons Mar. 10.

Period of record:

Water temperatures: Maximum, 24.0°C Aug. 15, 16, 1967; minimum, 1.0°C Dec. 31, 1968, Jan. 1, 1969.

Sediment concentrations: Maximum daily, 803 mg/l Jan. 20, 1968; minimum daily, 1 mg/l Mar. 9-10, 1969.

Sediment loads: Maximum daily, 72,600 tons Jan. 5, 1969; minimum daily, 2 tons Sept. 28, 29, 1967.

SNOHOMISH RIVER BASIN

83

12155500 SNOHOMISH RIVER AT SNOHOMISH, WASH.

LOCATION.--Lat 47°54'40", long 122°05'50", in NE1/4 sec.13, T.28 N., R.5 E., Snohomish County, at discontinued gaging station at bridge on State Highway 9 in Snohomish, 0.7 mile downstream from Pilchuck River and at mile 12.7.

DRAINAGE AREA.--1,714 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

Water temperatures: July 1959 to September 1961.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## STILLAGUAMISH RIVER BASIN

12167000 NORTH FORK STILLAGUAMISH RIVER NEAR ARLINGTON, WASH.

LOCATION.--Lat 48°16'05", long 122°00'45", in NE $\frac{1}{4}$ NE $\frac{1}{4}$  sec.15, T.32 N., R.6 E., Snohomish County, at bridge on State Highway 530, 3.0 miles upstream from gaging station, 6.7 miles northeast of Arlington, and at mile 8.5.

DRAINAGE AREA.--262 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: November 1961 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## STILLAGUAMISH RIVER BASIN

12168500 PILCHUCK CREEK NEAR BRYANT, WASH.

LOCATION (revised).--Lat 48°15'58", long 122°09'46", in NE¼NW¼ sec.16, T.32 N., R.5 E., Snohomish County, temperature recorder at gaging station on right bank, 500 ft upstream from bridge on State Highway 534, 1.8 miles north of Bryant, and at mile 6.4.

DRAINAGE AREA.--52.0 sq mi.

PERIOD OF RECORD.--Water temperatures: March 1952 to August 1968, March to September 1969.

EXTREMES.--March to September 1969:

Water temperatures: Maximum, 23.0°C June 18; minimum, 3.0°C Mar. 14.

Period of record:

Water temperatures: Maximum, 28.0°C July 28, 1958; minimum, 1.0°C on many days during winter periods.

## SKAGIT RIVER BASIN

87

12179000 SKAGIT RIVER ABOVE ALMA CREEK, NEAR MARBLEMOUNT, WASH.

LOCATION (revised).--Lat 48°36'27", long 121°21'37", in SW¼ sec. 15, T.36 N., R.11 E., Skagit County, Ross Lake National Recreation Area, temperature recorder at gaging station on right bank, 0.6 mile upstream from Alma Creek, 6.8 miles north of Marblemount, and at mile 85.8.

DRAINAGE AREA.--1,274 sq mi, of which 400 sq mi is in Canada.

PERIOD OF RECORD.--Chemical analyses: July 1959 to July 1960.

Water temperatures: January 1953 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 11.0°C on many days during June to September; minimum, 2.0°C on many days during January to February.

Period of record:

Water temperatures: Maximum, 13.5°C July 30, 1961, Sept. 5, 1966; minimum, 1.5°C Mar. 1, 1956.

REMARKS.--Clock stopped Dec. 30 to Jan. 28; recorded range in temperature, 2.0°C to 5.0°C. Thermograph not operating properly Jan. 29 to Feb. 5, May 1 to June 17; no temperature range available.

## SKAGIT RIVER BASIN

89

12182500 CASCADE RIVER AT MARBLEMOUNT, WASH.

LOCATION (revised).--Lat 48°31'26", long 121°22'58", in N $\frac{1}{4}$  sec.16, T.35 N., R.11 E., Skagit County, temperature recorder at gaging station on right bank, 1.1 miles downstream from Boulder Creek, 2.2 miles east of Marblemount, and at mile 2.9.

DRAINAGE AREA.--168 sq mi.

PERIOD OF RECORD.--Water temperatures: May 1952 to September 1964, October 1965 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 12.0°C on several days during July to September; minimum, freezing point on Jan. 29 to Feb. 1.

Period of record:

Water temperatures (1952-63, 1965-69): Maximum, 14.5°C July 27-29, 1958, and on several days during August 1961, Aug. 12, 13, 1963; minimum (1952-63, 1965-66, 1967-69), freezing point Feb. 1, 2, 18, 1956, Nov. 16, 1959, Jan. 19, 1960, Jan. 5, 1966, Jan. 29 to Feb. 1, 1969.

REMARKS.--Clock stopped Jan. 25-28; range in temperature not determined.

## SKAGIT RIVER BASIN

## 12200500 SKAGIT RIVER NEAR MOUNT VERNON, WASH.

LOCATION.--Lat 48°26'40", long 122°20'25", in SW $\frac{1}{4}$  sec. 7, T. 34 N., R. 4 E., Skagit County, at U.S. Interstate Highway 5, 1,200 ft downstream from gaging station, 1 mile north of Mount Vernon, and at mile 15.6.

DRAINAGE AREA.--5,093 sq mi, of which 400 sq mi is in Canada.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

Water temperatures: July 1962 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 16.0°C on several days during August to September; minimum, 1.0°C Jan. 26 to Feb. 1.

Period of record:

Water temperatures: Maximum, 16.5°C Aug. 8, 9, 30, 31, 1963; minimum, 1.0°C Jan. 28 to Feb. 1, 1969.

REMARKS.--Coliform, and dissolved oxygen data furnished by Washington State Water Pollution Control Commission.

Temperature recorder at gaging station 1,200 ft upstream from sampling site. Temperature recorder not operating properly Sept. 1-8; no range in temperature available.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## NOOKSACK RIVER BASIN

12207200 NORTH FORK NOOKSACK RIVER NEAR DEMING, WASH.

LOCATION.--Lat 48°52'24", long 122°08'56", in NW¼ sec.15, T.39 N., R.5 E., Whatcom County, temperature recorder at gaging station, on left bank 1.0 mile downstream from Coal Creek, 3.6 miles upstream from confluence with Middle Fork, and 4.5 miles northeast of Deming.

DRAINAGE AREA.--282 sq mi.

PERIOD OF RECORD.--Water temperatures: April 1968 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 16.0°C on several days during July, Aug. 1; minimum, freezing point Dec. 27-29, Jan. 23-29.

Period of record:

Water temperatures: Maximum, 16.0°C Aug. 1, 2, 8, 10, 1968, on several days during July and Aug. 1, 1969; minimum, freezing point Dec. 27-29, 1968, Jan. 23-29, 1969.

REMARKS.--Clock stopped July 25-29; range in temperature 8.0°C to 16.0°C.

NOOKSACK RIVER BASIN

95

12210500 NOOKSACK RIVER AT DEMING, WASH.

LOCATION.—Lat 48°50'30", long 122°17'35", in SE¼NE¼ sec.28, T.39 N., R.4 E., Whatcom County, at bridge on State Highway 542, 4.0 mile northwest of Deming, 5.7 miles downstream from gaging station, and at mile 30.9.

DRAINAGE AREA.—584 sq mi (at gaging station).

PERIOD OF RECORD.—Chemical analyses: July 1959 to September 1960 (daily), October 1960 to September 1962, October 1968 to September 1969 (monthly), October 1964 to September 1968 (miscellaneous). Prior to October 1962 published as "at Lawrence."

REMARKS.—Colliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

# NOOKSACK RIVER BASIN

97

12213100 NOOKSACK RIVER AT FERNDALE, WASH.

LOCATION.--Lat 48°50'45", long 122°35'15", in NE¼NW¼ sec.28, T.39 N., R.2 E., Whatcom County, at bridge on Mountain View Road at Ferndale, 300 ft upstream from gaging station, 1.0 mile downstream from Tennile Creek, and 5.9 miles upstream from mouth.

DRAINAGE AREA.--786 sq mi, of which 48.9 sq mi is in Canada.

PERIOD OF RECORD.--Chemical analyses: October 1961 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## KOOTENAI RIVER BASIN

12301500 KOOTENAI RIVER NEAR REXFORD, MONT.

LOCATION.--Lat 48°52'28", long 115°13'37", in SE $\frac{1}{4}$ NE $\frac{1}{4}$ NW $\frac{1}{4}$  sec.21, T.36 N., R.28 W., Lincoln County, at gaging station at bridge on State Highway 37, 300 ft downstream from Sullivan Creek, 1.1 miles southwest of Rexford, 3.5 miles downstream from Tobacco River, and at mile 260.5.

DRAINAGE AREA.--8,420 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: June to September 1967 (miscellaneous), October 1967 to September 1969 (monthly).

Water temperatures: October 1967 to September 1969.

Sediment records: October 1967 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 20.0°C Aug. 21; minimum, freezing point on many days during December to February.

## KOOTENAI RIVER BASIN

99

12301500 KOOTENAI RIVER NEAR REXFORD, MONT.--Continued

## EXTREMES.--1968-69--Continued:

 Sediment concentrations: Maximum daily, 537 mg/l May 14; minimum daily, 1 mg/l Jan. 22-25.  
 Sediment loads: Maximum daily, 89,900 tons May 27; minimum daily, 7.8 tons Jan. 23, 24.

Period of record:

 Water temperatures: Maximum, 21.0°C Aug. 3, 1968; minimum, freezing point on many days during winter periods.  
 Sediment concentrations: Maximum daily, 870 mg/l June 4, 1968; minimum daily, 1 mg/l Jan. 22-25, 1968.  
 Sediment loads: Maximum daily, 150,000 tons June 4, 1968; minimum daily, 7.8 tons Jan. 23, 24, 1968.  
 REMARKS.--Flow affected by ice Dec. 28 to Feb. 22.

## KOOTENAI RIVER BASIN

103

12301850 KOOTENAI RIVER AT WARLAND BRIDGE, NEAR LIBBY, MONT.

LOCATION.--Lat 48°30'00", long 115°17'02", in NW¼NE¼NE¼ sec. 34, T. 32 N., R. 29 W., Lincoln County, temperature recorder at gaging station on right bank at county road bridge, 0.1 mile downstream from Barron Creek, 14.5 miles northeast of Libby, and at mile 228.6.

DRAINAGE AREA.--8,892 sq mi (approximately).

PERIOD OF RECORD.--Water temperatures: June 1962 to September 1969 (seasonal records only).

EXTREMES.--1968-69:

Water temperatures: Maximum, 18.0°C on many days during July and August.

Period of record:

Water temperatures: Maximum, 20.0°C Aug. 14, 15, 1963.

REMARKS.--Recorder removed Nov. 6 to Mar. 25. Records furnished by Corps of Engineers, U.S. Army.

## KOOTENAI RIVER BASIN

12301933 KOOTENAI RIVER BELOW LIBBY DAM, NEAR LIBBY, MONT.

LOCATION.--Lat 48°22'00", long 115°19'20", in SE¼NE¼ sec.17, T.30 N., R.29 W., Lincoln County, on downstream side of bridge, 3.5 miles downstream from Libby Dam, 11 miles east of Libby, and at mile 218.2.

DRAINAGE AREA.--9,047 sq mi.

PERIOD OF RECORD.--Chemical analyses: June to September 1967 (miscellaneous), October 1967 to September 1969 (daily).

Water temperatures: October 1967 to September 1969.

Sediment records: October 1967 to September 1969.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 211 mg/l Mar. 4; minimum, 114 mg/l June 1-9.

Hardness: Maximum, 169 mg/l Feb. 4, Mar. 4; minimum, 94 mg/l June 22-30.

Specific conductance: Maximum daily, 339 micromhos Dec. 26-28; minimum daily, 174 micromhos May 26.

Water temperatures: Maximum, 21.0°C Aug. 25; minimum, freezing point on many days during winter period.

Sediment concentrations: Maximum daily, 851 mg/l June 7; minimum daily, 3 mg/l Oct. 6, Dec. 6, 8, 24.

A MEAN DISCHARGE FOR 295 DAYS CHEMICAL ANALYSES. MEAN DISCHARGE FOR 365 DAYS, 13,910 (CFS).

B DISCHARGE AT TIME OF SAMPLING.

## KOOTENAI RIVER BASIN

105

12301933 KOOTENAI RIVER BELOW LIBBY DAM, NEAR LIBBY, MONT.--Continued

## EXTREMES,--1968-69--Continued:

Sediment loads: Maximum daily, 159,000 tons June 7; minimum daily observed, 23 tons Dec. 24.

Period of record:

Dissolved solids: Maximum, 333 mg/l Feb. 1-26, 1968; minimum, 114 mg/l June 1-9, 1969.

Hardness: Maximum, 265 mg/l Dec. 14-31, 1967; minimum, 94 mg/l June 22-30, 1969.

Specific conductance: Maximum daily, 525 micromhos Dec. 24, 1967; minimum daily, 174 micromhos May 26, 1969.

Water temperatures: Maximum, 21.0°C Aug. 25, 1969; minimum, freezing point on many days during winter periods.

Sediment concentrations: Maximum daily, 1,200 mg/l June 5, 1968; minimum daily, 1 mg/l Apr. 13, 1968.

Sediment loads: Maximum daily, 200,000 tons June 5, 1968; minimum daily, 12 tons Apr. 13, 1968.

REMARKS.--Daily samples for chemical analysis composited by discharge. Additional samples were collected for more comprehensive definition of water quality at this station. Recorder removed Nov. 4 to Mar. 27. Thermograph records furnished by Corps of Engineers, U.S. Army. Records of discharge are given for Kootenai River at Warland Bridge, near Libby (station 12301850). Flow affected by ice Jan. 1 to Mar. 18.

## KOOTENAI RIVER BASIN

12301990 FISHER RIVER ABOVE WOLF CREEK, NEAR LIBBY, MONT.

LOCATION.—Lat 48°13'00", long 115°16'20", in SE $\frac{1}{4}$  sec.1, T.28 N., R.29 W., Lincoln County, at bridge 1.6 miles upstream from Wolf Creek and 18 miles southeast of Libby.

DRAINAGE AREA.—768 sq mi.

PERIOD OF RECORD.—Chemical analyses: June to September 1967 (miscellaneous), October 1967 to September 1969 (monthly).

D DAILY MEAN DISCHARGE.

12301990 FISHER RIVER ABOVE WOLF CREEK, NEAR LIBBY, MONT.--Continued

PERIOD OF RECORD.--Continued:

Sediment records: February 1968 to September 1969 (partial record).

REMARKS.--Water discharge computed by subtracting the discharge of Wolf Creek near Libby (station 12301999) from that of Fisher River near Jennings (station 12302000). Flow affected by ice during most of winter period.

## KOOTENAI RIVER BASIN

12301999 WOLF CREEK NEAR LIBBY, MONT.

LOCATION (revised).--Lat 48°14'01", long 115°16'25" in SE¼NE¼ sec.34, T.29 N., R.29 W., Lincoln County, at bridge 0.4 mile downstream from gaging station, 0.6 mile upstream from mouth, and 16.5 miles southeast of Libby.  
DRAINAGE AREA.--216 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: June to September 1967 (miscellaneous), October 1967 to September 1969 (daily).

Water temperatures: August 1967 to September 1969.

Sediment records: September 1967 to September 1969.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 145 mg/l Sept. 1-30; minimum, 79 mg/l May 1-17.

Hardness: Maximum, 107 mg/l Sept. 1-30; minimum, 34 mg/l May 1-17.

Specific conductance: Maximum daily, 242 micromhos Sept. 14; minimum daily, 85 micromhos May 12.

Water temperatures: Maximum, 22.0°C on several days during July and August; minimum, freezing point on many

days during winter period.

Sediment concentrations: Maximum daily, 978 mg/l Apr. 24; minimum daily, 1 mg/l on many days during September.

Sediment loads: Maximum daily, 3,460 tons Apr. 24; minimum daily, 0.03 ton on several days during September.

## KOOTENAI RIVER BASIN

113

12301999 WOLF CREEK NEAR LIBBY, MONT.--Continued

## Period of record:

Dissolved solids: Maximum, 179 mg/l Dec. 12-25, 1967; minimum, 79 mg/l May 1-17, 1969.

Hardness: Maximum, 132 mg/l Dec. 12-25, 1967; minimum, 34 mg/l May 1-17, 1969.

Specific conductance: Maximum daily, 308 micromhos Dec. 15, 1967; minimum daily, 65 micromhos May 12, 1969.

Water temperatures: Maximum, 24.0°C July 7-9, 11, 1968; minimum, freezing point on many days during winter periods.

Sediment concentrations: Maximum daily, 1,000 mg/l Feb. 20, 1968; minimum daily, 1 mg/l on many days during September 1969.

Sediment loads: Maximum daily, 3,460 tons Apr. 24, 1969; minimum daily, 0.03 ton on several days during September 1969.

REMARKS:--Daily samples for chemical analysis composited by discharge. Additional samples were collected for more comprehensive definition of water quality at this station. Temperature recorder at gaging station 0.4 mile upstream from sampling site. Flow affected by ice Nov. 17-19, Nov. 28 to Mar. 28. During periods of ice effect, sediment samples are taken in open channel.

S COMPUTED BY SUBDIVIDING DAY.

## 117

LOCATION.—Lat 48°14'33", long 115°17'30", in NW¼NE¼SW¼ sec. 27, T. 29 N., R. 29 W., Lincoln County, temperature recorder at gaging station on left bank, 0.4 mile downstream from bridge, 2.3 miles downstream from Wolf Creek, 8.5 miles southeast of Jennings, and 8.6 miles upstream from mouth.

PERIOD OF RECORD.--Water temperatures: May 1963 to September 1969 (seasonal records only), discontinued.

Water temperatures: Maximum, 22.0°C July 25.

Water temperatures: Maximum, 22.0°C on several days in 1965, 1968, and 1969.

REMARKS.--Recorder removed Nov. 4 to Mar. 27. Recorder stopped Apr. 30 to May 6, May 22 to June 3, July 27 to Aug. 8, Sept. 6-30. Records furnished by Corps of Engineers, U.S. Army.

## KOOTENAI RIVER BASIN

12302055 FISHER RIVER NEAR LIBBY, MONT.

LOCATION.--Lat 48°21'02", long 115°18'40", in SE $\frac{1}{4}$ SE $\frac{1}{4}$ NW $\frac{1}{4}$  sec.21, T.30 N., R.29 W., Lincoln County, at bridge 0.2 mile upstream from gaging station, 1 mile upstream from mouth, and 11.6 miles east of Libby.

DRAINAGE AREA.--838 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: June to September 1987 (miscellaneous), October 1987 to September 1989 (daily).

Water temperatures: September 1987 to September 1989.

Sediment records: September 1987 to September 1989.

EXTREMES.--1988-89:

Dissolved solids: Maximum, 143 mg/l Sept. 1-30; minimum, 68 mg/l May 8-29.

Hardness: Maximum, 123 mg/l Sept. 1-30; minimum, 41 mg/l May 8-29.

Specific conductance: Maximum daily, 254 micromhos Sept. 13; minimum daily, 63 micromhos May 30.

Water temperatures: Maximum, 22.0°C Aug. 23, 24; minimum, freezing point on many days during winter period.

Sediment concentrations: Maximum daily, 878 mg/l Apr. 24; minimum daily, 2 mg/l on several days during November, August, and September.

## 12302055 FISHER RIVER NEAR LIBBY, MONT.--Continued

## EXTREMES,--1968-69--Continued:

Sediment loads: Maximum daily, 10,000 tons Apr. 24; minimum daily, 0.63 ton Sept. 13.

Period of record:

Dissolved solids: Maximum, 143 mg/l Sept. 1-30, 1969; minimum, 56 mg/l June 1-13, 1968.

Hardness: Maximum, 123 mg/l Sept. 1-30, 1969; minimum, 36 mg/l May 12-31, 1968.

Specific conductance: Maximum daily, 254 micromhos Sept. 13, 1969; minimum daily, 63 micromhos May 30, 1969.

Water temperatures: Maximum recorded, 24.0°C July 11, Aug. 3, 1968; minimum, freezing point on many days during winter periods.

Sediment concentrations: Maximum daily, 1,300 mg/l Jan. 28, 1968; minimum daily, 1 mg/l Sept. 17, 22, 1967.

REMARKS:--Daily samples for chemical analysis composed by discharge. Additional samples were collected for more comprehensive definition of water quality at this station. Temperature recorder at gaging station 0.2 mile downstream from sampling site. Recorder inoperative May 16-27. Flow affected by ice during most of winter period. During periods of ice effect, sediment samples are taken in open channel.

## KOOTENAI RIVER BASIN

123

12304500 YAAK RIVER NEAR TROY, MONT.

LOCATION.—Lat 48°33'43", long 115°58'09", in NE $\frac{1}{4}$ SE $\frac{1}{4}$ SE $\frac{1}{4}$  sec. 5, T. 32 N., R. 34 W., Lincoln County, Kootenai National Forest, temperature recorder at gaging station on right bank, 500 ft upstream from bridge on U.S. Highway 2, 0.2 mile upstream from mouth, and 7.7 miles northwest of Troy.

DRAINAGE AREA.—766 sq mi.

PERIOD OF RECORD.—Water temperatures: May 1963 to September 1969 (seasonal records only).

EXTREMES.—1968-69:

Water temperatures: Maximum, 23.0°C Aug. 24.

Period of record:

Water temperatures: Maximum, 24.0°C Aug. 9, 1965, Aug. 3, 1966.

REMARKS.—Recorder removed Nov. 5 to Mar. 25. Records furnished by Corps of Engineers, U.S. Army.

## KOOTENAI RIVER BASIN

12305000 KOOTENAI RIVER AT LEONIA, IDAHO

LOCATION.--Lat 48°37'04", long 116°03'47", in NW¼ sec.20, T.33 N., R.34 W (Principal Meridian), Lincoln County, Mont., temperature recorder at gaging station at Leonia, 450 ft east of Montana-Idaho State line, 0.5 mile upstream from Boulder Creek, and at mile 171.6.

DRAINAGE AREA.--11,740 sq mi, approximately.

PERIOD OF RECORD.--Water temperatures: July 1962 to May 1963, April 1965 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 17.5°C Aug. 15.

Period of record:

Water temperatures: Maximum, 20.0°C Aug. 4, 1966; minimum (1962-63), freezing point on many days during winter periods.

REMARKS.--No record Oct. 13 to Mar. 28, Aug. 16 to Sept. 9

# KOOTENAI RIVER BASIN

125

12318500 KOOTENAI RIVER NEAR COPELAND, IDAHO  
(International gaging station)

LOCATION.—Lat 48°54'43", long 116°24'59", in NW¼NW¼SW¼ sec.12, T.84 N., R.1 W., Boundary County, at bridge on county highway, approximately 1 mile upstream from gaging station near Copeland, and at mile 123.2.

DRAINAGE AREA.—13,400 sq mi, approximately (at gaging station).

PERIOD OF RECORD.—Water temperatures: May 1966 to September 1969.  
Sediment records: May 1966 to September 1969.

## EXTREMES.—1966-69:

Water temperatures: Maximum, 19.0°C on many days during July and August; minimum, freezing point on several days during February, and probably sometime during period of missing record in January and February.  
Sediment concentrations: Maximum daily, 580 mg/l Apr. 25; minimum daily, 1 mg/l Oct. 2, Jan. 1, Sept. 20.  
Sediment loads: Maximum daily, 130,000 tons May 15, 16; minimum daily, 15 tons Jan. 1.

## Period of record:

Water temperatures: Maximum, 21.0°C Aug. 20, 1966; minimum, freezing point on several days during February 1969, and probably sometime during period of missing record during January and February 1969.  
Sediment concentrations: Maximum daily, 740 mg/l May 30, 1966; minimum daily, 1 mg/l on many days during 1968 and 1969.  
Sediment loads: Maximum daily, 155,000 tons May 30, 1966; minimum daily, 10 tons Jan. 13, 1968.

REMARKS.—This station is maintained by the United States in cooperation with Canada. No temperature record available Oct. 15 to Nov. 11, Dec. 24 to Feb. 3, Feb. 25 to Mar. 3. Sediment loads are estimated for Oct. 14 to Dec. 4, Dec. 17 to Mar. 18, July 16-21, Sept. 19, 21-28.

## KOOTENAI RIVER BASIN

12322000 KOOTENAI RIVER AT PORTHILL, IDAHO

LOCATION.--Lat 49°00'00", long 116°30'10", in SW¼ sec.8, T.65 N., R.1 W., Boundary County, temperature recorder at gaging station on right bank, 300 ft upstream from international boundary at Porthill, and at mile 105.63.

DRAINAGE AREA.--13,700 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: January 1949 to September 1950.

Water temperatures: January 1949 to September 1950, May 1963 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Minimum, freezing point on many days during winter months.

Period of record:

Water temperatures: Maximum (1949-50, 1963-68), 21.0°C on several days during August 1949, Aug. 3-5, 1965; minimum (1949-50, 1963-65, 1966-69), freezing point on many days during winter periods.

REMARKS.--No record available Mar. 11 to Sept. 30.

## PEND OREILLE RIVER BASIN

12324200 CLARK FORK AT DEER LODGE, MONT.

LOCATION.--Lat 46°23'52", long 112°44'31", in SW $\frac{1}{4}$  sec.33, T.8 N., R.9 W., Powell County, at county bridge on Milwaukee Avenue at Deer Lodge, at mile 461.2.

DRAINAGE AREA.--1,005 sq mi.

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

A FIELD DETERMINATION.

PEND OREILLE RIVER BASIN

131

12324600 CLARK FORK AT GARRISON, MONT.

LOCATION.--Lat 46°31'11", long 112°48'27", near center of east line of sec.23, T.9 N., R.10 W., Powell County, at county bridge at Garrison, 1 mile downstream from Little Blackfoot River and at mile 444.5.

DRAINAGE AREA.--1,550 sq mi.

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

A FIELD DETERMINATIONS.

## PEND OREILLE RIVER BASIN

12334600 BLACKFOOT RIVER NEAR LINCOLN, MONT.

LOCATION.--Lat 47°02'37", long 112°24'14", in SE $\frac{1}{4}$ NE $\frac{1}{4}$  sec.19, T.15 N., R.6 W., Lewis and Clark County, at gaging station 100 ft downstream from Surveyors Gulch and 14.5 miles northeast of Lincoln.

DRAINAGE AREA.--15.1 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1968 to September 1969.

Water temperatures: October 1968 to September 1969.

Sediment records: October 1968 to September 1969 (partial records).

PEND OREILLE RIVER BASIN

133

12334600 BLACKFOOT RIVER NEAR LINCOLN, MONT.--Continued

EXTREMES.--1968-69:

Specific conductance: Maximum daily, 251 micromhos Dec. 31; minimum daily, 101 micromhos Apr. 23.

Water temperatures: Maximum, 17.0°C July 25, 28, Aug. 24; minimum, freezing point on many days during winter period.

REMARKS.--Thermograph record unreliable Apr. 2 to July 21; once-daily measurements published for this period.

PEND OREILLE RIVER BASIN

12340500 CLARK FORK ABOVE MISSOULA, MONT.

LOCATION.--Lat 46°52'01", long 113°58'57", in NE1/4SW1/4 sec.22, T.13 N., R.19 W., Missoula County, at abandoned Van Buren Street Bridge in Missoula, 0.1 mile upstream from Rattlesnake Creek, 3.4 miles downstream from gaging station, and at mile 358.3.

DRAINAGE AREA.--5,999 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

A FIELD DETERMINATIONS.

PEND OREILLE RIVER BASIN

137

12353300 CLARK FORK NEAR ALBERTON, MONT.

LOCATION.--Lat 46°59'33", long 114°26'45", in S½SE¼ sec.1, T.14 N., R.23 W., Missoula County, at bridge 0.1 mile upstream from Petty Creek, 0.2 mile downstream from former gaging station, 1.7 miles east of Alberton, and at mile 319.8.

DRAINAGE AREA.--9,272 sq mi.

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

REMARKS.--Water discharge estimated from records for station 12354500 Clark Fork at St. Regis.

A FIELD DETERMINATIONS.

## PEND OREILLE RIVER BASIN

12359800 SOUTH FORK FLATHEAD RIVER ABOVE TWIN CREEK, NEAR HUNGRY HORSE, MONT.

LOCATION.--Lat 47°58'45", long 113°33'36", in NE¼NW¼NE¼ sec.36, T.26 N., R.16 W., Flathead County, Flathead National Forest, temperature recorder at gaging station on left bank, 0.1 mile downstream from Tin Creek, 0.4 mile upstream from Twin Creek, 36.3 miles southeast of Hungry Horse, and at mile 46.7.

DRAINAGE AREA.--1,160 sq mi.

PERIOD OF RECORD.--Water temperatures: May 1965 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 18.0°C Aug. 22-25; minimum, freezing point on many days during winter period.

Period of record:

Water temperatures: Maximum, 19.0°C Aug. 17-19, 1967; minimum, freezing point on many days during winter periods.

REMARKS.--Recorder stopped Oct. 4-14, May 30 to June 19; range in temperature, 6.0°C to 8.0°C, 6.0°C to 11.0°C, respectively.

PEND OREILLE RIVER BASIN

139

12363500 FLATHEAD RIVER NEAR KALISPELL, MONT.

LOCATION.—Lat 48°12'38", long 114°15'23", in NE $\frac{1}{4}$ NE $\frac{1}{4}$ SW $\frac{1}{4}$  sec.10, T.28 N., R.21 W., Flathead County, at bridge on county road, 2.5 miles northeast of Kalispell and at mile 128.0.

DRAINAGE AREA.—4,500 sq mi.

PERIOD OF RECORD.—Water temperatures: January 1949 to September 1950, August 1963 to September 1967 (at gaging station 12363000, 15 miles upstream), October 1967 to September 1969 (discontinued).  
Sediment records: July 1965 to September 1969 (discontinued).  
Prior to October 1967y published as 12363000 Flathead River at Columbia Falls.

EXTREMES.—1968-69:

Water temperatures: Maximum, 19.0°C July 23, 24; minimum, freezing point Dec. 27, 28, Jan. 18, 19.  
Sediment concentrations: Maximum daily, 324 mg/l Apr. 24; minimum daily, 1 mg/l on many days during November, January, March, and July to September.  
Sediment loads: Maximum daily, 30,600 tons Apr. 24; minimum daily, 5.6 tons Sept. 29.

Period of record:

Water temperatures: Maximum, 21.0°C Aug. 8, 1968; minimum, freezing point on several days during winter periods.  
Sediment concentrations: Maximum daily, 980 mg/l May 21, 1967; minimum daily, 1 mg/l on several days most years.  
Sediment loads: Maximum daily, 140,000 tons May 23, 1967; minimum daily, 4 tons Mar. 4-6, 1967.

REMARKS.—Flow affected by ice Dec. 27, 28, Jan. 18, 19. Records of discharge are given for Flathead River at Columbia Falls (station 12363000). No appreciable inflow or outflow occurs between the two points.

## PEND OREILLE RIVER BASIN

12369000 FLATHEAD RIVER NEAR BIGFORK, MONT.

LOCATION.--Lat 48°05'33", long 114°08'50", in NE $\frac{1}{4}$ NE $\frac{1}{4}$  sec.22, T.27 N., R.20 W., Flathead County, at bridge on State Highway 208, 3 miles northwest of Bigfork and at mile 106.5.

DRAINAGE AREA.--0,300 sq mi (approximately).

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

REMARKS.--Discharge records estimated from Flathead River at Columbia Falls (station 12363000).

A FIELD DETERMINATIONS.

PEND OREILLE RIVER BASIN

143

12371550 FLATHEAD LAKE AT POLSON, MONT.

LOCATION.--Lat 47°41'43", long 114°10'00", near center of sec.4, T.22 N., R.20 W., Lake County, at bridge on U.S. Highway 93 at western edge of Polson, 4.5 miles upstream from Kerr Dam and at mile 76.0.

DRAINAGE AREA.--7,086 sq mi.

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

REMARKS.--Discharge records are given for Flathead River near Polson (station 12372000).

A FIELD DETERMINATIONS.

## PEND OREILLE RIVER BASIN

12389000 CLARK FORK NEAR PLAINS, MONT.

LOCATION.--Lat 47°27'15", long 114°53'36", in NE1/4 sec.34, T.20 N., R.26 W., at bridge on county road, 1 mile southwest of Plains, 2.7 miles downstream from gaging station, 8.7 miles downstream from Flathead River, and at mile 236.3.

DRAINAGE AREA.--19,958 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July to September 1969.

Water temperatures: November 1968 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 22.0°C Aug. 24, 25; minimum, freezing point on many days during winter period.

REMARKS.--Temperature recorder at gaging station 2.7 miles upstream from sampling site.

A FIELD DETERMINATIONS.

PEND ORRILLE RIVER BASIN

147

12385500 PEND ORRILLE RIVER AT NEWPORT, WASH.

LOCATION.--Lat 48°11'10", long 117°02'00", in SE¼SW¼ sec.24, T.56 N., R.6 W., Bonner County, Idaho, at bridge on U.S. Highway 2, 0.2 mile downstream from gaging station at Newport, 1.8 miles downstream from Abeni Falls Dam, and at mile 88.5.

DRAINAGE AREA.--24,200 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No appreciable inflow between sampling point and gaging station.

CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## COLUMBIA RIVER MAIN STEM

12399500 COLUMBIA RIVER AT INTERNATIONAL BOUNDARY, WASH.  
(Irrigation network station)

LOCATION.--Lat 48°55'00", long 117°47'40", in SW¼SW¼ sec.33, T.40 N., R.40 E., Stevens County, at bridge on State Highway 25 at Northport, 10.9 miles downstream from gaging station at international boundary, and at mile 734.1.

DRAINAGE AREA.--59,700 sq mi, approximately (at gaging station).

PERIOD OF RECORD.--Chemical analyses: February 1910 to January 1911, November 1951 to September 1969.

Water temperatures: November 1951 to September 1969.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 113 mg/l Feb. 18 to Mar. 19; minimum, 75 mg/l July 1 to Aug. 16.

Hardness: Maximum, 85 mg/l Feb. 18 to Apr. 5; minimum, 63 mg/l July 1-31.

Specific conductance: Maximum daily, 192 micromhos Mar. 5; minimum daily, 129 micromhos July 14, 21.

Water temperatures: Maximum, 19.5°C Aug. 24; minimum, 1.0°C Jan. 23, 25 to Feb. 2.

## 12399500 COLUMBIA RIVER AT INTERNATIONAL BOUNDARY, WASH.--Continued

## Period of record:

Dissolved solids: Maximum, 158 mg/l Feb. 23, 1963; minimum, 71 mg/l July 8-25, 1964.

Hardness: Maximum, 128 mg/l Feb. 23, 1963; minimum, 62 mg/l July 16-31, Aug. 16-31, 1959, July 1-31, 1961, July 26 to Aug. 15, 1964, July 12 to Aug. 1, 1967.

Specific conductance: Maximum daily, 257 micromhos Feb. 23, 1963; minimum daily, 120 micromhos Aug. 28, 1968.

Water temperatures: Maximum, 21.0°C May 14, 19, 1959; minimum, freezing point on several days during January

in 1960, 1962, and 1963.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission.

No appreciable inflow between sampling point and gaging station except during periods of heavy local runoff.

## KETTLE RIVER BASIN

12404900 KETTLE RIVER NEAR BARSTOW, WASH.

LOCATION (revised).--Lat 48°47'05", long 118°07'30", in SW¼SW¼ sec.16, T.38 N., R.37 E., Ferry County, at bridge on county road, 0.1 mile downstream from Toulou Creek, 1.1 miles east of Barstow, and at mile 10.9.

DRAINAGE AREA.--4,044 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1960 to September 1962 (monthly), October 1968 to September 1969 (quarterly), October 1964 to September 1968 (miscellaneous).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

## COLVILLE RIVER BASIN

153

12409000 COLVILLE RIVER AT KETTLE FALLS, WASH.

LOCATION.--Lat 48°33'35", long 118°05'45", in NW¼NW¼ sec.29, T.36 N., R.38 E., Stevens County, at bridge on county road, 0.2 mile upstream from Washington Water Power Company's plant, 0.3 mile upstream from gaging station, 0.5 mile south of town of Kettle Falls, and at mile 5.3.

DRAINAGE AREA.--1,007 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1960 to September 1963, October 1967 (monthly), October 1968 to September 1969 (quarterly), October 1963 to September 1967 (miscellaneous).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

A SAMPLE FILTERED AND ACIDIFIED IN FIELD.  
B SAMPLE ACIDIFIED IN FIELD, BUT NOT FILTERED.

## SPOKANE RIVER BASIN

155

12416000 HAYDEN CREEK BELOW NORTH FORK, NEAR HAYDEN LAKE, IDAHO  
(Hydrologic bench-mark station)

LOCATION.—Lat 47°49'22", long 116°39'10", in NW¼ sec. 25, T. 52 N., R. 3 W., Kootenai County, at gaging station on right bank, 0.3 mile downstream from confluence of East and North Forks and 7.5 miles northeast of Hayden Lake Post Office.

DRAINAGE AREA.—22.0 sq mi.

PERIOD OF RECORD.—Chemical analyses: November 1966 to September 1967 (miscellaneous), October 1967 to September 1969 (monthly).

Sediment records: October 1968 to September 1969 (partial records).

## 12419500 SPOKANE RIVER ABOVE LIBERTY BRIDGE, NEAR OTIS ORCHARDS, WASH.

LOCATION.--Lat 47°41'55", long 117°02'35", in NW¼NW¼ sec.6, T.25 N., R.46 E., Spokane County, at bridge on U.S. Highway 10 at State line, 2.1 miles upstream from gaging station, 3.3 miles upstream from Liberty Bridge, 3.5 miles east of Otis Orchards, and at mile 96.0.

DRAINAGE AREA.--3,880 sq mi, approximately (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1965 (daily), October 1965 to September 1966 (miscellaneous), October 1966 to September 1969 (monthly).  
Water temperatures: December 1963 to September 1965.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No appreciable inflow between sampling point and gaging station except during period of heavy local runoff.

## SPOKANE RIVER BASIN

159

## 12424500 SPOKANE RIVER AT SEVENMILE BRIDGE, NEAR SPOKANE, WASH.

LOCATION.--Lat 47°44'25", long 117°31'10", in NE¼NE¼ sec.20, T.26 N., R.42 E., Spokane County, at bridge on Sevenmile Road, 7.3 miles northwest of Spokane, 10.5 miles downstream from Hangman Creek, and at mile 61.9.

DRAINAGE AREA.--5,020 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses.--December 1965 to September 1966 (miscellaneous), November 1966 to September 1969 (monthly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## SPOKANE RIVER BASIN

## 12431000 LITTLE SPOKANE RIVER AT DARTFORD, WASH.

LOCATION.--Lat 47°47'05", long 117°24'12", in NE¼NW¼ sec.5, T.26 N., R.43 E., Spokane County, at Mill Road bridge, 50 ft downstream from gaging station, 0.5 mile east of Dartford, 1.7 miles downstream from Deadman Creek, and at mile 11.4.

DRAINAGE AREA.--685 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1960 to September 1966 (monthly), October 1967 to September 1969 (partial record).

Water temperatures: July 1968 to September 1969.

## SPOKANE RIVER BASIN

161

## 12431000 LITTLE SPOKANE RIVER AT DARTFORD, WASH.--Continued

## EXTREMES,--1968-69:

Water temperatures: Maximum, 22.0°C June 4, 6, 7; minimum, freezing point Jan. 2-5.

Period of record:

Water temperatures: Maximum, 22.0°C June 4, 6, 7, 1969; minimum, freezing point Jan. 2-5, 1969.

REMARKS,--Coliform and dissolved oxygen furnished by Washington State Water Pollution Control Commission. Temperature recorder at gaging station 50 ft upstream. Recorder stopped Sept. 29 to Oct. 10, 1968, and Jan. 2-5, 1969; ranges in temperature, 9.0°C to 13.0°C and 0.0°C to 3.0°C, respectively.

## SPOKANE RIVER BASIN

163

## 12433000 SPOKANE RIVER AT LONG LAKE, WASH.

LOCATION.--Lat 47°50'20", long 117°51'05", in NW 1/4 sec. 14, T. 27 N., R. 39 E., Lincoln County, at bridge on Spring Creek Road (State Highway 231), 0.6 mile downstream from gaging station at Long Lake powerhouse, 0.6 mile upstream from Chamokane Creek, 12 miles north of Reardon, and at mile 33.3.

DRAINAGE AREA.--6,020 sq mi, approximately (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1969.

Water temperatures: July 1959 to September 1962, October 1966 to September 1969.

## EXTREMES.--1968-69:

Water temperatures: Maximum, 21.0°C July 10, 24; minimum, 1.0°C Feb. 8-15.

Period of record:

Water temperatures: Maximum, 24.5°C Aug. 18, 1959; minimum, freezing point Jan. 21, Feb. 26, 1960.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission. No inflow between sampling point and gaging station.

## OKANOGAN RIVER BASIN

187

12439500 OKANOGAN RIVER AT OROVILLE, WASH.

LOCATION.—Lat 48°55'51", long 119°25'09", in SE $\frac{1}{4}$ SW $\frac{1}{4}$  sec. 27, T. 40 N., R. 27 E., Okanogan County, at gaging station at Cherry Street Bridge in Oroville, 0.5 mile downstream from Tonasket Creek and at mile 77.3.

DRAINAGE AREA.—3,210 sq mi, approximately.

PERIOD OF RECORD.—Chemical analyses: July 1959 to October 1960 (daily), October 1963 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

Water temperatures: July 1959 to September 1960.

REMARKS.—Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## OKANOGAN RIVER BASIN

## 12442500 SIMILKAMEEN RIVER NEAR NIGHTHAWK, WASH.

LOCATION.--Lat 48°56'05", long 119°26'25", in NE1/4 sec. 28, T.40 N., R.27 E., Okanogan County, at 12th Avenue bridge at Oroville, 10.0 miles east of Nighthawk, 10.8 miles downstream from gaging station, and at mile 5.0.

DRAINAGE AREA.--3,550 sq mi, approximately (at gaging station).

PERIOD OF RECORD.--Chemical analyses: January 1949 to September 1950 (daily), October 1963 to September 1966 (miscellaneous), October 1966 to September 1969 (quarterly);  
Water temperatures: January 1949 to September 1950, October 1966 to September 1969.

## EXTREMES.--1968-69:

Water temperatures: Maximum, 26.5°C Aug. 14; minimum, freezing point on many days November to March.

## Period of record:

Water temperatures: Maximum, 26.5°C Aug. 14, 1969; minimum, freezing point on many days during winter periods.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission. Daily chemical analyses and water temperatures for period January 1949 to September 1950 published as Similkameen River at Oroville. Temperature records obtained at county bridge at Nighthawk, 1.7 miles upstream from gaging station.

## OKANOGAN RIVER BASIN

169

12447200 OKANOGAN RIVER AT MALOTT, WASH.

LOCATION.--Lat 48°16'55", long 119°42'15", in NW¼NW¼ sec.16, T.32 N., R.25 E., Okanogan County, at bridge in Malott, 75 ft downstream from gaging station, 0.1 mile upstream from Loup Loup Creek, and at mile 17.0.

DRAINAGE AREA.--8,100 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: July 1959 to September 1963 (monthly), October 1963 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly). Prior to October 1963 published as "near Brewster".

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## METHOW RIVER BASIN

12449950 METHOW RIVER NEAR PATEROS, WASH.

LOCATION.--Lat 48°04'36", long 119°58'03", in NW¼ sec. 28, T.30 N., R.23 E., Okanogan County, at bridge on State Highway 16, 1.0 mile downstream from gaging station, 2.4 miles downstream from Black Canyon Creek, 3.5 miles west of Pateros, and at mile 5.7.

DRAINAGE AREA.--1,772 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: July 1959 to October 1962 (monthly), October 1963 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).

Water temperatures: October 1968 to September 1969.

## EXTREMES.--1968-69:

Water temperatures: Maximum, 22.0°C on several days during July; minimum, freezing point on many days during December to February.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission. Temperature recorder at gaging station on right bank 1.0 mile upstream from sampling site. Prior to October 1963, published as "at Pateros".

## CHELAN RIVER BASIN

12452500 CHELAN RIVER AT CHELAN, WASH.

LOCATION.--Lat 47°49'54", long 120°00'37", in SE<sup>1</sup>SE<sup>1</sup> sec.13, T.27 N., R.22 E., Chelan County, at gaging station in forebay at control dam at outlet to Lake Chelan, 0.4 mile south of Chelan and at mile 4.5.

DRAINAGE AREA.--924 sq mi.

PERIOD OF RECORD.--Chemical analyses: November 1961 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## CRAB CREEK BASIN

12472600 CRAB CREEK NEAR BEVERLY, WASH.

LOCATION.--Lat 46°49'55", long 119°48'55", in NE1/4SE1/4 sec.33, T.16 N., R.24 E., Grant County, at bridge on Lower Crab Creek Road, 1.5 miles upstream from gaging station, 5.7 miles east of Beverly, and at mile 4.5.

DRAINAGE AREA.--4,842 sq mi, of which 665 sq mi in the vicinity of Soap Lake is noncontributing (at gaging station).

PERIOD OF RECORD.--Chemical analyses: August 1959 to September 1969.

Water temperatures: August 1959 to September 1962, July 1968 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 30.0°C June 4; minimum, freezing point on many days December to February.

Period of record:

Water temperatures: Maximum, 31.0°C July 7, 8, 1960, July 27, 28, 1968; minimum, freezing point on many days during winter periods.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission.

Temperature recorder at gaging station 1.5 miles downstream from sampling site. Recorder malfunction Dec. 28-Jan. 3 and Jan. 15-31; no range in temperature available. Recorder stopped Apr. 24-28; range in temperature, 6.0°C to 19.0°C. No appreciable inflow between sampling point and gaging station except during periods of heavy local runoff.

## YAKIMA RIVER BASIN

179

## 12479500 YAKIMA RIVER AT CLE ELUM, WASH.

LOCATION.--Lat 47°11'35", long 120°56'55", in SW1/4 sec. 27, T. 20 N., R. 15 E., Kittitas County, at bridge on county road, 300 ft upstream from gaging station at Cle Elum, 0.1 mile downstream from Crystal Creek, 1.3 miles downstream from Tillman Creek, and at mile 183.1.

DRAINAGE AREA.--495 sq mi.

PERIOD OF RECORD.--Chemical analyses: February 1910 to January 1911, December 1952 to September 1956 (daily), July 1959 to July 1960 (monthly), October 1960 to September 1961, October 1963 to September 1968 (miscellaneous), October 1968 to September 1969 (quarterly).  
Water temperatures: December 1952 to September 1956.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission.

## YAKIMA RIVER BASIN

181

12484000 WILSON CREEK AT THRALL, WASH.

LOCATION.--Lat 46°55'00", long 120°30'25", in NE¼SW¼ sec.31, T.17 N., R.19 E., Kittitas County, at bridge on U.S. Highway 97, approximately 100 ft upstream from mouth and 1.0 mile south of Thrall.

DRAINAGE AREA.--382 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## YAKIMA RIVER BASIN

12484900 YAKIMA RIVER AT ROZA DAM, WASH.

LOCATION.--Lat 46°46'50", long 120°27'10", in NW¼NE¼ sec.21, T.15 N., R.19 E., Yakima County, at Roza diversion dam, 8.0 miles downstream from Untanum Creek, 12.3 miles north of Yakima, and at mile 127.9.

DRAINAGE AREA.--1,802 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

Water temperatures: October 1965 to September 1969.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 117 mg/l Mar. 8-19; minimum, 50 mg/l May 24 to June 9.

Hardness: Maximum, 89 mg/l Mar. 8-19; minimum, 34 mg/l May 24 to June 9.

Specific conductance: Maximum daily, 182 micromhos Mar. 12, 13; minimum daily, 67 micromhos June 7.

Water temperatures: Maximum, 18.5°C July 9-10; minimum, freezing point many days December to February.

## 12484900 YAKIMA RIVER AT ROZA DAM, WASH.--Continued

Period of record:

Dissolved solids: Maximum, 138 mg/l Oct. 24 to Nov. 15, 1965; minimum, 50 mg/l May 24 to June 9, 1969.

Hardness: Maximum, 88 mg/l Oct. 24 to Nov. 15, 1965; minimum, 34 mg/l July 27 to Aug. 31, 1966, Mar. 1-24, 1968, May 24 to June 9, 1969.

Specific conductance: Maximum daily, 224 micromhos Nov. 15, 1965; minimum daily, 67 micromhos June 7, 1969.

Water temperatures: Maximum, 19.5°C July 5, 17, 18, 1967; minimum, freezing point on several days during

January 1966, Dec. 15, 1967, Jan. 28, 29, 1968, many days during December 1968 to February 1969.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission.

No discharge records available.

## YAKIMA RIVER BASIN

12488500 AMERICAN RIVER NEAR NILE, WASH.

LOCATION.--Lat 46°58'39", long 121°10'05", in NW¼ sec.12, T.17 N., R.13 E., Yakima County, Snoqualmie National Forest, temperature recorder at gaging station on right bank, 300 ft upstream from bridge on Bumping River Road, 4.9 miles downstream from Hall Creek, 16.0 miles northwest of Nile, and at mile 0.5.

DRAINAGE AREA.--78.9 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1962 to September 1964.  
Water temperatures: October 1968 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 15.5°C Aug. 14; minimum, freezing point on many days during December to March.

REMARKS.--Prior to October 1968 sampling site 300 ft downstream. Recorder malfunction Dec. 28 to Jan. 5, Jan. 10 to Feb. 3; no range in temperature available. Recorder stopped Aug. 20-29; range in temperature 9.0°C to 11.0°C.

## YAKIMA RIVER BASIN

187

12498700 NACHES RIVER NEAR YAKIMA, WASH.

LOCATION.--Lat 46°37'55", long 120°35'10", in SE¼NW¼ sec.9, T.13 N., R.18 E., Yakima County, at bridge on old U.S. Highway 410, 1.8 miles north of Yakima and at mile 3.7.

DRAINAGE AREA.--976 sq mi.

PERIOD OF RECORD.--Chemical analyses: July 1960 to September 1969.

REMARKS.--Coliform, dissolved oxygen, and temperature data furnished by Washington State Water Pollution Control Commission. No discharge records available.

## CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## YAKIMA RIVER BASIN

12505000 YAKIMA RIVER NEAR PARKER, WASH.

LOCATION.—Lat 46°29'50", long 120°26'35", in NW¼ sec. 28, T. 12 N., R. 19 E., Yakima County, at Sunnyside diversion dam, 700 ft upstream from gaging station, 1.5 miles east of Parker, 3 miles downstream from Ahtanum Creek, and at mile 103.8.

DRAINAGE AREA.—3,660 sq mi.

PERIOD OF RECORD.—Chemical analyses: August 1959 to September 1969.

Water temperatures: August 1959 to September 1969.

EXTREMES.—1968-69:

Dissolved solids: Maximum, 159 mg/l Dec. 31-Jan. 1; minimum, 55 mg/l June 1-19.

Hardness: Maximum, 90 mg/l Dec. 31-Jan. 1; minimum, 30 mg/l June 1-19.

Specific conductance: Maximum daily, 391 micromhos Dec. 1; minimum daily, 68 micromhos June 7.

Water temperatures: Maximum, 21.5°C June 19, July 19; minimum, freezing point on Jan. 2-4, 12, 24.

## YAKIMA RIVER BASIN

189

12505000 YAKIMA RIVER NEAR PARKER, WASH.--Continued

## Period of record:

Dissolved solids: Maximum, 204 mg/l Nov. 29, 30, 1962; minimum, 44 mg/l Jan. 1-13, 1960.

Hardness: Maximum, 122 mg/l Nov. 29, 30, 1962; minimum, 27 mg/l Jan. 1-13, 1960.

Specific conductance: Maximum daily, 391 micromhos Dec. 1, 1968; minimum daily, 68 micromhos June 7, 1969.

Water temperatures: Maximum, 22.0°C on several days during June to August of most years; minimum, freezing point on many days during winter periods.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission. Approximately 15 percent of yearly flow is diverted at Sunnyside diversion dam. No inflow between sampling point and gaging station.

## YAKIMA RIVER BASIN

12510500 YAKIMA RIVER AT KIONA, WASH.  
(Irrigation network station)

LOCATION.—Lat 46°15'10", long 119°28'35", in SE 1/4 sec. 19, T. 9 N., R. 27 E., Benton County, at highway bridge 0.1 mile downstream from gaging station at Kiona, 3.7 miles downstream from Corral Canyon Creek, 5.1 miles downstream from intake of Kiona Canal, and at mile 29.8.

DRAINAGE AREA.—5,615 sq mi.

PERIOD OF RECORD.—Chemical analyses: December 1952 to September 1969.

Water temperatures: December 1952 to September 1969.

EXTREMES.—1968-69:

Dissolved solids: Maximum, 243 mg/l Oct. 1-13; minimum, 86 mg/l May 11-June 9.

Hardness: Maximum, 135 mg/l July 11-31; minimum, 50 mg/l May 11-June 9.

Specific conductance: Maximum daily, 379 micromhos Oct. 12; minimum daily, 113 micromhos June 5-7.

## YAKIMA RIVER BASIN

193

12510500 YAKIMA RIVER AT KIONA, WASH.--Continued

## EXTREMES.--1968-69:--Continued

Water temperatures: Maximum, 25.0°C July 27; minimum, freezing point on several days during December to February.

Period of record:

Dissolved solids: Maximum, 246 mg/l Oct. 1-16, 1966; minimum, 76 mg/l May 1-23, 1957.

Hardness: Maximum, 148 mg/l Oct. 1-11, 1958; minimum, 42 mg/l May 1-23, 1957, Dec. 16-31, 1959.

Specific conductance: Maximum daily, 410 micromhos Oct. 13, 1966; minimum daily, 99 micromhos Dec. 17, 1959.

Water temperatures: Maximum, 29.0°C July 18, 1980, July 21, 1981; minimum, freezing point on several days during winter periods.

REMARKS.--Coliform and dissolved oxygen data furnished by Washington State Water Pollution Control Commission.

## PART 13. SNAKE RIVER BASIN

## TRIBUTARIES BETWEEN GAGING STATIONS NEAR MORAN AND ABOVE RESERVOIR NEAR ALPINE, WYO.

13018300 CACHE CREEK NEAR JACKSON, WYO.  
(Hydrologic bench-mark station)

LOCATION (revised).--Lat 43°27'08", long 110°42'12", in SW $\frac{1}{4}$ SW $\frac{1}{4}$ SE $\frac{1}{4}$  sec.1, T.40 N., R.116 W., Teton County, Teton National Forest, at gaging station 1.8 miles upstream from town of Jackson water-supply intakes, 4.5 miles southeast of Jackson, and 5 miles upstream from mouth.

DRAINAGE AREA.--10 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: July 1965 to September 1969.

Sediment records: June 1968 to September 1969 (partial records).

## SNAKE RIVER MAIN STEM

13022500 SNAKE RIVER ABOVE RESERVOIR, NEAR ALPINE, WYO.

LOCATION.--Lat 43°11'47", long 110°53'18", Lincoln County, sampled at bridge at Astoria Springs, Teton County, 3 miles downstream from Hoback River, 13 miles upstream from gaging station, and 15 miles northeast of Alpine.

DRAINAGE AREA.--3,465 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

Water temperatures: October 1965 to September 1966.

Sediment records: October 1968 to September 1969 (miscellaneous).

## SALT RIVER BASIN

207

13027500 SALT RIVER ABOVE RESERVOIR, NEAR ETNA, WYO.

LOCATION (revised).--Lat 43°04'47", long 111°02'12", in SW $\frac{1}{4}$ NE $\frac{1}{4}$  sec.28, T.36 N., R.119 W., Lincoln County, at gaging station 3.4 miles northwest of Etna and at mile 8.0.

DRAINAGE AREA.--829 sq mi.

PERIOD OF RECORD.--Chemical analyses: October 1965 to September 1969.

Water temperatures: October 1965 to September 1966.

Sediment records: October 1968 to September 1969 (miscellaneous).

## SNAKE RIVER MAIN STEM

13037500 SNAKE RIVER NEAR HEISE, IDAHO  
(Irrigation network station)

LOCATION.--Lat 43°37'43", long 111°41'03", in SW¼SW¼ sec.31, T.4 N., R.41 E., Jefferson County, at Eagle Rock canal headgate, 1.2 miles upstream from Heise, 1.8 miles downstream from Anderson canal headgate, 1.8 miles downstream from gaging station, approximately 4.8 miles east of Ririe, approximately 21 miles upstream from Henrys Fork, and at mile 859.8.

DRAINAGE AREA.--5,752 sq mi (at gaging station).

PERIOD OF RECORD.--Chemical analyses: January 1953 to September 1969.

Water temperatures: January 1953 to September 1969.

## EXTREMES.--1968-69:

Dissolved solids: Maximum, 263 mg/l Feb. 1-4; minimum, 168 mg/l July 1-31.

Hardness: Maximum, 190 mg/l Feb. 5 to Mar. 26; minimum, 139 mg/l July 1-31.

Specific conductance: Maximum daily, 447 micromhos Feb. 12; minimum daily, 290 micromhos Aug. 13.

Water temperatures: Maximum, 18.0°C Aug. 31; minimum, 1.0°C on several days during December and January.

## 13037500 SNAKE RIVER NEAR HEISE, IDAHO--Continued

Period of record:

Dissolved solids: Maximum, 378 mg/l Nov. 11-20, 1956; minimum, 148 mg/l June 11, 1968.

Hardness: Maximum, 276 mg/l Feb. 1-28, 1955; minimum, 110 mg/l June 11, 1966.

Specific conductance: Maximum daily, 791 micromhos Nov. 13, 1956; minimum daily, 240 micromhos June 28, 1954.

Water temperatures: Maximum, 19.5°C July 19, 1955; minimum, freezing point on many days during winter periods

most years.

REMARKS. -- Approximately 2.5 percent of normal annual streamflow of 5,000,000 acre-feet is diverted by Anderson canal between sampling point and gaging station. This diversion occurs during the months of May to November. Except for leakage through the headgate, no other diversion or appreciable inflow between sampling point and gaging station except during periods of heavy local runoff.

## HENRYS FORK BASIN

211

13055000 TETON RIVER NEAR ST. ANTHONY, IDAHO

LOCATION.—Lat 43°55'40", long 111°36'55", in SW $\frac{1}{4}$  sec.15, T.7 N., R.41 E., Fremont County, temperature recorder at gaging station on right bank, 0.5 mile upstream from railroad bridge, 4 miles southeast of St. Anthony, and at mile 22.

DRAINAGE AREA.—890 sq mi, approximately.

PERIOD OF RECORD.—Chemical analyses: October 1965 to September 1969 (miscellaneous).

Water temperatures: April 1964 to September 1969.

EXTREMES.—1968-69:

Water temperatures: Maximum, 22.0°C on several days during July and August; minimum, freezing point Dec. 8, 9, Jan. 13.

Period of record:

Water temperatures: Maximum, 22.0°C on several days during July and August 1966-69; minimum, freezing point on many days during winter periods.

## SNAKE RIVER MAIN STEM

13154500 SNAKE RIVER AT KING HILL, IDAHO  
(Irrigation network station)

LOCATION.--Lat 43°00'10", long 115°12'28", in NE¼SE¼ sec.12, T.5 S., R.10 E., Elmore County, at county highway bridge, approximately 1,700 ft downstream from gaging station at King Hill, 20 miles downstream from Big Wood River, and at mile 545.3.

DRAINAGE AREA.--35,800 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: March 1951 to September 1969.

Water temperatures: March 1951 to September 1969.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 344 mg/l Nov. 18 to Dec. 15; minimum, 162 mg/l Apr. 15.

Hardness: Maximum, 213 mg/l Oct. 1-13; minimum, 85 mg/l Apr. 15.

Specific conductance: Maximum daily, 562 micromhos Oct. 19, 25; minimum daily, 298 micromhos Apr. 15.

CHEMICAL ANALYSES, WATER YEAR OCTOBER 1968 TO SEPTEMBER 1969

## EXTREMES.--1968-69:--Continued

Period of record:

Hardness: Maximum, 222 mg/l Dec. 1-31, 1966; minimum, 85 mg/l Apr. 15, 1969.

Water temperatures: Maximum, 23.0°C Aug. 2, 1955; minimum, 4.0°C Dec. 16, 1967, Jan. 29, 1969.

REMARKS.--No appreciable inflow between gaging station and sampling point except during period of heavy local runoff.

## BRUNEAU RIVER BASIN

13169500 BIG JACKS CREEK NEAR BRUNEAU, IDAHO  
(Formerly published as Wickahoney Creek near Bruneau)  
(Hydrologic bench-mark station)

LOCATION.--Lat 42°47'06", long 115°59'00", in NW¼SE¼ sec.28, T.7 S., R.4 E., Owyhee County, at gaging station on left bank, 0.2 mile upstream from confluence with Little Jacks Creek (revised) and 11.5 miles southwest of Bruneau.

DRAINAGE AREA.--253 sq mi.

PERIOD OF RECORD.--Chemical analyses: January 1967 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

Sediment records: October 1968 to September 1969 (partial records).

## BOISE RIVER BASIN

13212500 BOISE RIVER AT NOTUS, IDAHO  
(Irrigation network station)

LOCATION.--Lat 43°43'21", long 116°47'34", in S4SE4 sec.34, T.5 N., R.4 W., Canyon County, at highway bridge 1,100 ft downstream from gaging station, 0.3 mile southeast of Notus, 7 miles northwest of Caldwell, and at mile 14.0.

DRAINAGE AREA.--3,820 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: January 1939 to January 1940, November 1950 to September 1969. Water temperatures: November 1950 to September 1969.

Sediment records: January 1939 to June 1940.

EXTREMES.--1968-69:

Dissolved solids: Maximum, 393 mg/l Oct. 20 to Nov. 17; minimum, 88 mg/l June 6-13.

Hardness: Maximum, 175 mg/l Oct. 20 to Nov. 17; minimum, 40 mg/l Apr. 11 to May 6.

Specific conductance: Maximum daily, 688 micromhos Dec. 4; minimum daily, 121 micromhos Apr. 20.

## EXTREMES. --1968-69:--Continued

Water temperatures: Maximum, 24.0°C July 25, 30; minimum, 1.0°C Feb. 14.

Period of record:

Dissolved solids: Maximum, 914 mg/l Aug. 21-31, 1939; minimum, 77 mg/l May 1-10, 1952, June 11-20, 1953.

Hardness: Maximum, 284 mg/l July 21-31, 1939: minimum, 35 mg/l June 11-26, 1953.

Specific conductance: Maximum daily, 1,470 micromhos July 30, Aug. 26, 1939; minimum daily, 82 micromhos

Apr. 27, 1952.

**Water temperatures:** Maximum, 29.5°C on several days during summer periods in

REMARKS.--No appreciable inflow between gaging station and sampling point except during periods of heavy local runoff.

## 13251300 WEST BRANCH WEISER RIVER NEAR TAMARACK, IDAHO

LOCATION.--Lat 45°01'14", long 116°26'06", in SE<sup>1</sup>SE<sup>4</sup> sec.34, T.20 N., R.1 W., Adams County, temperature recorder at gaging station on left bank at Price Valley guard station, 0.1 mile upstream from East Branch Weiser River and 5.2 miles northwest of Tamarack.

DRAINAGE AREA.--3.96 sq mi.

PERIOD OF RECORD.--Water temperatures: August 1959 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 14.0°C July 20-26, 28-31; minimum, freezing point on many days during winter period.

Period of record:

Water temperatures: Maximum (1959-63, 1964-69), 16.5°C July 20, 1960, Aug. 12, 1963, July 31, 1966; minimum, freezing point on several days during winter periods.

## SNAKE RIVER MAIN STEM

13269000 SNAKE RIVER AT WEISER, IDAHO

LOCATION.--Lat 44°14'35", long 116°58'35", in NE¼NW¼ sec.28, T.15 S., R.47 E., Malheur County, Oreg., 1,200 ft upstream from gaging station at bridge on U.S. Highway 30N at Weiser, 2,300 ft downstream from Weiser River, and at mile 351.5.

DRAINAGE AREA.--69,200 sq mi, approximately.

PERIOD OF RECORD.--Water temperatures: June 1967 to September 1969.

## EXTREMES.--1968-69:

Water temperatures: Maximum, 25.0°C on several days during July and August; minimum, 1.0°C Dec. 30 to Jan. 1.

Period of record:

Water temperatures: Maximum, 27.0°C July 7-10, 1968; minimum, freezing point Dec. 14-17, 21, 1967.

## SNAKE RIVER MAIN STEM

223

13290200 SNAKE RIVER BELOW PINE CREEK AT OXBOW, OREG.

LOCATION.--Lat 44°58'40", long 116°51'25", in NW¼NW¼ sec.9, T.7 S., R.48 E., Adams County, Idaho, temperature recorder opposite gaging station on right bank at Oxbow, 0.1 mile upstream from Hansaker Creek, 0.1 mile north of Oxbow school, 6.3 mile downstream from Pine Creek, 3.2 miles south of Homestead, and at mile 269.65.

DRAINAGE AREA.--73,150 sq mi, approximately.

PERIOD OF RECORD.--Water temperatures: May 1956 to September 1969.

## EXTREMES.--1968-69:

Water temperatures: Maximum, 22.0°C Aug. 14-29, 31; minimum, 2.0°C Feb. 6-23.

Period of record:

Water temperatures: Maximum (1956-62, 1963-69), 27.0°C July 25, 1956; minimum, freezing point on several days during January 1957.

## SALMON RIVER BASIN

13317000 SALMON RIVER AT WHITE BIRD, IDAHO

LOCATION.--Lat 45°45'01", long 116°19'23", in NE¼NW¼ sec.22, T.28 N., R.1 E., Idaho County, at gaging station on left bank just upstream from White Bird Creek, 0.5 mile downstream from Canfield-Joseph highway bridge, 1 mile southwest of White Bird, and at mile 53.7.

DRAINAGE AREA.--13,550 sq mi, approximately, including White Bird Creek basin.

PERIOD OF RECORD.--Chemical analyses: November 1958 to September 1959, October 1965 to September 1969 (miscellaneous).

Water temperatures: October 1966 to September 1969.

EXTREMES.--1968-69:

Water temperatures: Maximum, 25.0°C Aug. 23; minimum, freezing point Jan. 2, 18, 24.

Period of record:

Water temperatures: Maximum, 25.0°C Aug. 23, 1969; minimum, freezing point Jan. 2, 18, 24, 1969.

## GRANDE RONDE RIVER BASIN

225

13331500 MINAM RIVER AT MINAM, OREG.  
(Hydrologic bench-mark station)

LOCATION.--Lat 45°37'12", long 117°43'32", in SW¼SW¼ sec.29, T.2 N., R.41 E., Wallowa County, at gaging station on left bank, 0.3 mile west of Minam, 2.3 miles downstream from Squaw Creek, and at mile 0.3.

DRAINAGE AREA.--240 sq mi, approximately.

PERIOD OF RECORD.--Chemical analyses: December 1966 to September 1968 (miscellaneous), October 1968 to September 1969 (monthly).

Water temperatures: October 1965 to September 1969.

Sediment records: October 1967 to September 1969 (miscellaneous).

## EXTREMES.--1968-69:

Water temperatures: Maximum, 24.0°C Aug. 22, 23; minimum, freezing point on many days during winter period.

Period of record:

Water temperatures: Maximum, 26.0°C Aug. 17, 18, 1967; minimum, freezing point on many days during winter periods.

REMARKS.--Recorder stopped Jan. 31 to Feb. 7; range in temperature, 0.0°C to 4.0°C.
